

State of Maryland
Interagency Committee on School Construction
MEETING MINUTES – April 17, 2014

AGENDA (2014 - 307)

<u>SECTION</u>	<u>Page</u>
I - APPROVAL OF THE MINUTES	1-2
II - DISCUSSION ITEMS AND DEFERRED ITEMS	3-36
III - APPROVAL OF CONTRACTS	37-45
IV - APPROVAL OF SITES	46-47
V - APPROVAL OF PROPERTY TRANSFERS	48-50
VI - APPROVAL OF ACCOUNTING ACTIONS	
A. Audit Exceptions	51
B. Project Allocation Reversions	52
C. Cancellation of a Contract Award	53-54
D. Report on Closed Projects	55-56
VII - APPROVAL OF OTHER ITEMS	57-58
VIII - INFORMATION	
A. Change Orders	59-79
B. Property Transfers - 1 acre or less	None
C. Other	None
IX - FUND ADJUSTMENTS	80-82
SIGNATURE PAGE	83

APPENDICES – SECTION II

- A. DRAFT - Emergency Shelter Compliance Process Procedures
- B. FY 2015 Capital Improvement Program – 100% IAC Recommendations Report
- C. DRAFT FY 2011 Annual Maintenance Report

The Interagency Committee on School Construction (IAC) meeting was held on April 17, 2014 at the Nancy S. Grasmick State Education Building, 200 West Baltimore Street, Baltimore, MD 21201. The IAC members present at the meeting were: Ms. Kristy Michel (proxy for Dr. Lillian M. Lowery) and Mr. Richard Hall; Members present via teleconference: Mr. Fred Mason (proxy for Mr. Alvin Collins), and Mr. Tim Maloney. The meeting was chaired by Ms. Kristy Michel.

August 15, 2013 -

SECTION III – Approval of Contracts

Anne Arundel County – Severn River Middle

PSC# 02.096.10/14 C

Project Type: Renovation – Open Space Conversion

Contract #1 (1 contract)

Change Account to Decrease from \$769,496 to \$663,764

Add Note:

3) Retain \$105,732 for additional contracts.

July 30, 2013 -

SECTION III – Approval of Contracts

Howard County – Rockburn Elementary

PSC# 13.050.06/14 SR

Project Type: Roof Replacement

Change Account to Decrease from \$330,222 to \$0

Add Note:

3) Retain \$330,222 for additional contracts.

July 18, 2013 -

SECTION III – Approval of Contracts

Anne Arundel County – Annapolis High

PSC# 02.030.11/14 C

Project Type: Renovation – Open Space Conversion

Contract #1 (1 contract)

Change PSC # from 02.030.14 C to 02.030.011/14 C

Change Account to Decrease from \$925,778 to \$898,897

Add Note:

4) Retain \$26,881 for additional contracts.

September 20, 2012 -

SECTION III – Approval of Contracts

Anne Arundel County – Central Middle

PSC# 02.018.13 C

Project Type: Renovation – Open Space Conversion

Contract #1 (1 contract)

Change Account to Decrease from \$753,125 to \$662,515

Add Note:

5) Retain \$90,610 for additional contracts.

IAC ACTION: THE ABOVE REFERENCED ITEMS WERE:

	Approved	Disapproved	Deferred	Abstain	Recuse
Dr. Lillian M. Lowery	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Mr. Richard Hall	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Mr. Alvin Collins	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Mr. Thomas Lewis	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Mr. Tim Maloney	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

A. INFORMATIONAL ITEM – LEGISLATIVE UPDATE

BILLS APPROVED

The following bills approved during the 2014 session of the General Assembly are of particular importance for the Interagency Committee on School Construction:

HB 160 / SB 170 – Budget Bill

Approved a supplemental request for FY14 for a new position of Maintenance Inspection Program Manager. When filled, this position will provide crucial support to allow the Maintenance Inspection Program to continue to inspect schools on a six-year rotation cycle.

IAC Actions: Qualifications for the position are under development. However, DBM has indicated that the position cannot be filled before October 1 due to budget constraints. We are appealing this decision in order to fill the position and train the occupant before the next round of inspections begins in late August 2014.

HB 161 / SB171 – Creation of a State Debt

Allocates \$275,000,000 to the Public School Construction Program; \$6,109,000 to the Aging Schools Program; and \$3,500,000 to the Nonpublic Aging Schools Program. See Section II Item on Nonpublic Aging Schools Program for changes to funding methodology and impact.

HB 190 / SB 218 - FY 2014 QZAB Authorization

Establishes an allocation for the Qualified Zone Academy Bond program in the amount of \$4,625,000 for fiscal year 2015.

IAC Actions: Preliminary applications have been taken and a motion is presented to the IAC for Board of Public Works approval on May 14, 2014, of the allocations to individual LEAs (see Section II Agenda Item)

HB 207 – State Capital Projects - High Performance Buildings - Maryland Green Building Council

Establishes an alternative path for State buildings to meet the requirement for high performance compliance under a green building code to be recommended by the Maryland Green Building Council and approved by the Secretaries of the Department of Budget and Management and General Services. New and replacement public school buildings will also be able to access the alternative code-based path to compliance.

IAC Actions: It is anticipated that the Maryland Green Building Council will complete its review of the International Green Construction Code (IgCC) in October 2014 and will then recommend it to the Secretaries as an alternative high performance building path. Concurrently, IAC staff will work with the Council to develop procedures that will allow LEAs to access the green code as an alternative path, once it is approved by the Secretaries.

SB 232 / HB 727 – Prevailing Wage - Applicability

For public school construction projects, reduces the threshold at which prevailing wage rates apply to State participation from 50% to 25% of the total construction cost of the project, for projects with a minimum construction cost of \$500,000.

IAC Actions: IAC staff will revise regulations and the Administrative Procedures of the Public School Construction Program to reflect the change. It is anticipated that there will be a very large increase in the number of projects that are subject to prevailing wage rates, and some reduction in the number of side-by-side bids (i.e., with and without prevailing wage rates).

SB 238 / HB 628 – Board of Public Works – Relocatable Classrooms – Indoor Air Quality Requirements

Requires that relocatable classrooms constructed after July 1, 2014 must meet standards to be established in Board of Public Works regulations, including for volatile organic compounds (VOCs). When this bill was first passed in 2007, no nationally recognized standards for VOCs existed. The other provisions of the 2007 law, addressing air infiltration, protection against water damage, forced ventilation, programmable thermostats, and energy-efficient lighting and HVAC, are already covered under current building codes that are enforced by the Department of Housing and Community Development.

In March 2012 the International Code Council approved the International Green Construction Code (IgCC), which contains a workable section on VOCs. The IAC developed regulations for approval of the BPW in 2013, including reference to sections of Chapter 8 of the IgCC on indoor air quality and VOCs. In accordance with the law, the regulations would have had a retroactive application to all units purchased or leased by LEAs after October 1, 2007. Because of industry opposition to this provision, the regulations were withdrawn and the original sponsor of the bill agreed to an amendment in order to make the application of the requirements prospective from July 1, 2014.

IAC Actions: IAC staff has begun work with the Department of Health and Mental Hygiene and the Children’s Environmental Health and Protection Advisory Council to explore other VOC standards in addition to the IgCC, and to develop practices that will assist the LEAs to implement health practices in general.

SB 927 / HB 1323 – Public School Construction Creative Financing Study

In its original form, the bill would establish a new Supplemental Public School Construction Matching Fund Program to provide grants to Qualifying Counties, defined as counties that have at least 100,000 full-time equivalent students in their school systems and have a consistent triple-A bond rating from two of the three rating agencies.

In final form, the bill requires the IAC in collaboration with the State Treasurer’s Office, local school systems, and local governments “to conduct a study and make recommendations on (1) developing creative means, financing or otherwise, to increase funding for public school construction; (2) creating more reliable revenue streams that could include leveraging funds by counties to meet public school construction needs; and (3) examining the use of lease payments for other alternative financing methods, as defined in §4–126 of the Education Article, by local school systems for public school construction.” An interim report is to be submitted prior to December 1, 2014, and a final report prior to September 1, 2015.

IAC Actions: The PSCP has communicated to the Administration and to DLS a preliminary workplan, including an assessment of resources needed. In order for the final report to have value, it will require very extensive research, at a minimum, into the following areas:

- *Background Information:*
 - *Determination of Maryland’s need.*
 - *The capital funding programs of other states, certain Canadian provinces, and potentially other countries.*
 - *Maryland’s statutory and regulatory environment.*
 - *Clarification of the State’s goals for education, equity, finance, tax impacts, etc.*
- *Alternative Funding Sources:*
 - *Grant and loan programs available through the federal government, MEDCO, nongovernmental organizations, and others.*
 - *Tax credit programs available through the State and federal government.*
 - *Taxes and fees: Sales tax, income tax, property tax, impact fees, assessments, TIFs, other.*
 - *Private sources: Business and nonprofit grants, donations, exactions, proffers, other.*

- Alternative Financing Sources: Public private partnerships, including leveraging of assets, use of non-traditional school venues, design-build-finance-maintain-operate, other.
- Consequences:
 - For all funding and financing methods, the federal and State consequences for Maryland's credit rating and tax exempt bond issuances.
 - Modeling: Study of combinations of funding and financing methods.
- Recommendations

*In order to carry out this assignment, a working group of individuals from STO and other branches of State government, the local school systems, local governments, and others will be formed. The group will meet at least monthly, beginning immediately. While there is no question that considerable expertise exists within the State and in local boards of education and governments to review and analyze aspects of the study, **additional contract positions are essential if the report is to have value:***

- **A research assistant.** This could be a graduate student in public policy or finance. This individual would conduct research into published materials and into the funding and financing practices of other public bodies.
- **Access to financial expertise.** A critical component of the study will be modeling advanced funding and financing approaches. For example, while experts in State government can likely determine the future annual yield of an incremental sales tax, there are a variety of methods for capitalizing that yield into current project funding; outside expertise is needed to fully explore these options.

*We assume that a minimum of two full days per week will be required on the part of the Executive Director between mid-April and the beginning of October to prepare the December interim report. To make this possible, the Deputy Director will need to assume a larger share of certain Executive Director tasks, particularly preparation for the FY 2016 CIP and updating the regulations and Administrative Procedures Guide. **Rapid filling of the approved Maintenance Inspection Program Manager position is essential for this assumption of responsibilities to happen.***

Without the staff positions noted, it will not be possible for IAC to carry out the assigned report with any level of thoroughness, accuracy, or credibility. We therefore seek the support of the IAC to address our staffing concerns to the Board of Public Works and the Administration. Without proper resources, this study will not have the value that it should have and will not make a significant contribution to the problem that the legislation is intended to address.

B. Design and Planning Professionals on Local School System Staff

Background

In 2006 the Interagency Committee asked the Designees to investigate the internal capacity of local school systems to perform design reviews on complex capital projects. Initially we reported there were 41 registered architects and engineers on local board staff. We have since expanded the list to include planners and green building specialists.

Findings

We do not see significant changes in design and construction professional staff at local boards of education in this school year. The number of registered architects employed by local boards of education increased by two; registered engineers decreased by one; certified planners increased by two; and green building specialists holding Leadership in Energy and Environmental Design (LEED) certifications decreased by one.

As of November 2013 local board of education staffs have:

- 18 registered architects
- 24 registered professional engineers
- Seven (7) certified planners, and
- 17 LEED certificate holders.

As in previous years 12 of the 24 school systems have registered architects and engineers on staff. This year Baltimore and Montgomery County Public Schools each employ nine (9); Anne Arundel has six (6); Baltimore City and Prince George's have five (5); Wicomico has two (2); and six (6) school systems each have one (1) architect or engineer on staff. The remaining 12 school systems rely on consultants and State professionals for project analysis and design review.

Prince George's Public Schools has added an AICP member to their staff. Six (6) school systems have AICP members on staff – Frederick, Howard, Montgomery, Prince George's, St. Mary's, and Baltimore City.

Washington County Public Schools has lost its LEED specialist. Ten school systems continue to have one or more LEED specialists on staff.

State Professionals

For comparison with the State agencies assigned to the school construction:

- PSCP has two (2) registered architects;
- MSDE has three (3) registered architects; and
- DGS (Schools & Community Colleges Unit) has two (2) registered architects as well as on-call consultants.
- There are no AICP members or LEED certified professionals on the State school construction staff.

The table that follows summarizes the number of design professionals in each school system.

C. Prototype Design Use in Maryland Public School Construction

Background

Staff conducted a brief survey and reported to the IAC in 2008 on the use of prototype designs in Maryland public schools. The report found prototype designs are commonly used within school systems where new schools are needed and have advantages in certain situations. Since then, PSCP staff has submitted an annual report to the IAC on prototype schools in development. The PSCP supports the use of repeat designs when appropriate, and when post-occupancy evaluations are conducted to continually improve the design.

Prototype projects are exempt from the strict September 1 and November 1 design submission deadlines for funding eligibility as an incentive to use repeat plans. To date no school systems have taken advantage of the relaxed submission dates. Requests for funding typically occur after the schematic and design development phases have proceeded and been completed for the projects as “locally-funded” projects.

In 2009 only two school systems had active prototype school design projects. In 2014 six school systems have active prototype projects. A summary of prototype design activity is shown below. A table with more detailed information on currently active projects is attached.

Date	School System	Name of School	# School Systems	# Active Projects
2011	Anne Arundel Harford Montgomery Montgomery Prince George's	Germantown ES Campus Hills (Schucks Rd) ES Clarksburg Village Site #1 ES Clarksburg/Damascus MS Fairwood ES	4	5

D. Relocatable Classrooms in Maryland Public Schools

Attached are three tables summarizing the use of relocatable classrooms in Maryland public school systems during School Year (SY) 2013-14.

- Number of Relocatable Classrooms in Use as Instructional Space
- Change in Number of Relocatable Classrooms in Use for Instruction from Last Year
- Estimated Percentage of Students in Relocatables 2010 – 2013

There are a total of 2,776 relocatable classrooms in use for instruction. This is an increase of 54 from last year’s corrected total. Prince George’s and Montgomery Counties Public Schools, with 510 and 432 respectively, have by far the largest number and reported the greatest increases. Two other school systems reported increases and 14 reported decreases.

Currently the State owns 140 relocatable classrooms. Six were demolished in SY12-13. Of the remaining total, 111 are in use to relieve overcrowding, provide space for special programs, or provide temporary housing during major renovation projects; 29 are vacant, pending relocation, reversion to the State, or demolition.

Assuming 23 students per classroom, Maryland’s total fleet of relocatable classrooms in use for instructional purposes has the capacity to house approximately 63,848 students in relocatables. This would represent approximately 7% of Maryland’s total public school enrollment. The school system with the greatest percentage of students in relocatable classrooms is Charles County Public Schools at 22%.

This report does not include classrooms that are vacant or in use for administrative, storage, or other purposes. It also does not include 25 semi-permanent, modular buildings, with steel frames on concrete slabs, in the Baltimore City Public School System.

Relocatables requested to be reverted to the State are inspected for condition. Classrooms that are useable may remain in their location with the agreement of the school system until another user is identified. Classrooms that can no longer be used by the School Construction Program are declared surplus, offered to other State or local government agencies, or are demolished.

A more detailed inventory of the State-owned units is available on request.

Footnotes

- * Harford - 5 State-owned, vacant relocatable classrooms were approved by DGS on 2/21/14 to be removed.
- ** Montgomery - Reports that of their local relocatable classrooms, 382 are in use due to enrollment demands and 46 due to construction displacement. Eight additional local relocatables are used for non-instructional purposes. Six State-owned relocatables were demolished in 2013.
- *** St. Mary's - Requested relocation within the county of 11 vacant State-owned classrooms in the FY15 CIP.
- **** Baltimore City PS - Not included in count are 25 locally-owned, steel-frame modular units on concrete slabs.
- ***** This figure has been corrected.

E. Emergency Shelter Compliance Procedures

On September 27, 2013 the Interagency Committee on School Construction approved Preliminary Procedures for the Emergency Shelter Compliance Process, in compliance with COMAR 23.03.02.29. With respect to schools that involve an upgrade or replacement of the electrical system, this regulation requires local officials to consult with the Maryland Emergency Management Agency (MEMA) to determine areas of a school that may be designated for public shelter use during or after a federal, state, or local declared emergency, and to ensure that the designated area can be fully powered in the event of an emergency. The IAC charged the staff of the Public School Construction Program to implement the Preliminary Procedures and to return to the IAC with final Administrative Procedures that would address all school construction projects that involve an upgrade or replacement of the electrical system. On March 14, 2014 the IAC approved an extension to April 17, 2014 for submission by staff of the final Administrative Procedures for IAC approval.

In November 2013, the PSCP sent letters to LEAs indicating that a total of 59 schools submitted for approval of planning or funding of major projects in the FY 2015 CIP were subject to the Emergency Shelter Compliance Process outlined in the Preliminary Procedures. In collaboration with the Maryland Emergency Management Agency (MEMA) and the Department of Human Resources (DHR), experience has been gained in implementing the Preliminary Procedures. The LEAs have been highly cooperative in this process. We are pleased to report that all but two (2) of the 59 projects have now completed the Compliance Process.

In January 2014, the PSCP engaged JMT Engineers to assist in the development of definitions and criteria for the Emergency Shelter Requirement with respect to smaller projects in the CIP and the other State funding programs: systemic renovations, small renovation projects, and additions. The attached draft Final Administrative Procedure and draft Appendix for the Emergency Shelter Compliance Process include the engineering firm's contribution, as well as adjustments of the procedural requirements. LEAs were requested to review the draft Procedures and respond with comments or changes by April 7, 2014; a number of LEA suggestions have been incorporated into the Procedures, and where changes were not made, explanations were provided to the LEAs.

Upon approval, we will investigate the potential for application of the Emergency Shelter Requirement to smaller projects in the FY 2015 CIP, which were not included in the November list of 59 schools. All subject projects in the FY 2015 QZAB and ASP programs, as well as subject projects in the upcoming FY 2016 CIP will be required to comply with the Emergency Shelter Compliance Process.

Motion:

TO APPROVE FINAL ADMINISTRATIVE PROCEDURES FOR COMPLIANCE WITH THE EMERGENCY SHELTER REQUIREMENT FOR SCHOOL CONSTRUCTION PROJECTS THAT INVOLVE AN UPGRADE OR REPLACEMENT OF THE ELECTRICAL SYSTEM AT SCHOOLS THAT WILL POTENTIALLY SERVE AS EMERGENCY SHELTERS IN THE EVENT OF A FEDERAL, STATE, OR LOCAL EMERGENCY.

F. Nonpublic Aging Schools Program (NASP)

Fiscal 2014 Summary

The Maryland General Assembly provided \$3.5 million in fiscal 2014 capital funds to the Public School Construction Program (PSCP) for grants to nonpublic schools for renovations and improvements to existing buildings. Nonpublic schools participating in the fiscal 2013 Maryland Nonpublic Student Textbook Loan Program were eligible to apply. The NASP funds are for expenditures eligible under the PSCP Aging Schools Program (ASP). The program is administered by the Maryland State Department of Education (MSDE) and the PSCP.

The maximum grant allocation for each school is based on school year 2012-13 enrollment with \$50 per student in schools reporting 20% or more of the total enrollment eligible for free and reduced price meals and \$35 per student in schools reporting less than 20% of the total enrollment eligible for free and reduced price meals. The minimum allocation to any participating school is \$5,000. The largest maximum allocation based on enrollment is \$68,200. Distributed across the State, the largest allocations went to nonpublic schools in Baltimore County, 21%; Prince George’s County, 16%; Montgomery County, 15%; Baltimore City, 12% and Anne Arundel County, 9%. Caroline, Dorchester, Garrett, and Kent Counties had no nonpublic schools participating in the textbook loan program and did not receive any NASP funds.

Administrative procedures and application forms were issued August 1, 2013 by MSDE and PSCP. The Designees for the Interagency Committee on School Construction later made two changes to the procedures – extending the applications deadline from December 2, 2013 to January 31, 2014 and granting an exception to the rule requiring all participating schools to be 16 years or older to permit the funding of security-related capital improvements in younger buildings.

359 nonpublic schools were eligible to participate. As of April 2, 2014 we have approved projects in 265 schools with a total maximum grant allocation of \$2,965,385. Reimbursement payments in the total amount of \$754,135 have been made to 71 schools for pre-approved, completed projects. Projects must be under contract by June 30, 2014. Requests for reimbursement will be received through calendar year 2014.

Projects for security and safety improvements and interior renovations are the most frequently requested and approved. Attached are FY14 Nonpublic Aging Schools Program and Project Type Summaries as of April 2, 2014.

Fiscal 2015 Revisions

The General Assembly has approved \$3.5 million in funding for the Nonpublic Aging Schools Program in the FY15 Public School Construction capital budget, as well as new language changing the method of funding distribution and excluding preschools. In FY15, eligible schools may apply and be funded based on three separate criteria:

1. At least 20% of students enrolled in 2013 are eligible for the free or reduced price meal program;
2. Tuition charged (average tuition revenue) is less than the statewide average per-pupil expenditure for public schools; and
3. The school facility has an average age of 50 years or more.

If a school meets all three criteria, the school may receive up to \$100,000. If a school meets two of the three criteria, the school may receive up to \$75,000. If a school meets one of the three criteria, the school may receive up to \$25,000. If a school meets none of the criteria and the school facility has an average age of 16 years or more the school may receive up to \$5,000.

Based on the names of nonpublic schools eligible for the FY14 NASP, approximately 28 preschools will be excluded. In FY14, only 87 out of the total 359 schools had greater than 20% of their students eligible for free and reduced price meals. If all 87 submitted applications and the new criteria were applied, these 87 schools would have met two of the criteria and been eligible for allocations up to \$75,000 each, or a total of \$6.5 million. If the FY15 requests exceed the \$3.5 million allocation, \$250,000 will be reserved for schools receiving \$5,000 grants and the balance will be prorated by MSDE.

To address these changes, we will convene a “lessons learned” team and revise the administrative procedures before the next release. In order to calculate the maximum grant awards we will require all applications to be submitted by a certain date early in the fiscal year. MSDE staff is scheduled to meet with the State Superintendent’s Nonpublic Schools Work Group on May 6, 2014.

NOTES:

1. Maximum Total Allocation exceeds \$3.5 million because one school had under-reported 2012 enrollment and school grant was adjusted.
2. Two applications were denied because schools were younger than 16 years of age.
3. Reimbursement data provided by the Public School Construction Program.
4. For additional information contact Barbara Bice, Maryland State Department of Education at 410-767-0097 or bbice@msde.state.md.us.

G. Baltimore City Public Schools: Comprehensive Maintenance Plan and Project Delivery

The Designees wish to report on the status of the City Schools Comprehensive Maintenance Plan (CMP) and the execution of State-funded projects by City Schools, and to present recommendations for the further improvement of the school system's facility management program.

I. Comprehensive Maintenance Plan

The Baltimore City Public Schools Construction and Revitalization Act of 2013 authorizes the Maryland Stadium Authority (MSA) to issue up to \$1.1 billion for the replacement or renovation of schools in Baltimore City. A Memorandum of Understanding (MOU), required under the Act to be developed among Baltimore City Public Schools (City Schools), the Maryland Stadium Authority (MSA), the Interagency Committee on School Construction, and Baltimore City, was approved by the Board of Public Works on October 16, 2013. The Act mandates that the MOU shall require "[a] plan developed by the Baltimore City Board of School Commissioners and approved by the Interagency Committee on School Construction for preventative and ongoing maintenance for existing, new, and renovated Baltimore City public school facilities, including funding sufficient to implement the plan." §10-646(E)(11).

Section 11 of the MOU states:

City Schools shall develop, for approval by the IAC, a Comprehensive Maintenance Plan ("CMP") for preventative and ongoing maintenance of all School Buildings, which shall provide for sufficient funding to implement the CMP. The following requirements shall apply to the CMP:

- 1. The CMP shall be a written plan approved by the School Board that describes a strategy for maintaining all School Buildings and for achieving progress toward the Metrics that are described below.*
- 2. The CMP shall ensure that Maintenance is performed for all School Buildings for which City Schools has operational responsibility.*
- 3. The CMP shall apply to all School Buildings, which include:*
 - a. The 10-Year Plan Projects under the Act;*
 - b. All existing School Buildings for which the School Board has operational responsibility; and*
 - c. All other School Buildings that the School Board replaces or funds improvements for through the CIP.*

Under the terms of the MOU, approval of the CMP is a crucial step in the eventual approval of MSA-Funded 10-Year Plan projects: following approval of the CMP, City Schools will have six months in which to develop maintenance metrics to be approved by the IAC. Progress toward achievement of these metrics will be one of the factors that the IAC will examine in considering future project approvals, beginning in the fall of 2015. Moreover, the individual Building Maintenance Plans that are a requirement of the MOU must be approved by MSA before construction funds will be released.

On December 17, 2013 the Board of School Commissioners approved the CMP, which was forwarded to the Public School Construction Program (PSCP). On February 21, 2014, the PSCP returned comments to City Schools, representing the combined responses of the four agencies that comprise the IAC as well as MSA. Included with the PSCP document were examples from other LEA CMPs that illustrate methods for presenting information on the status of maintenance and the condition of buildings. The comments indicated why the submitted CMP was not satisfactory in meeting the MOU requirement, specifically that “[a]t a minimum, the CMP must demonstrate specific staffing, budget, and organizational components to make significant improvement over the five (5) years following the date of approval of the CMP by the IAC.” Section 11.B. In the view of IAC staff, “significant improvement” would require that the entire facility management organization in City Schools in general, and the maintenance functions in particular, be brought to levels of operational efficiency and effectiveness that are equivalent to those of the other large school systems in Maryland.

On April 4, 2014, the PSCP received a revised CMP from City Schools. The re-submitted CMP is still largely a statement of intentions rather than a Comprehensive Maintenance Plan as this term is understood among Maryland’s LEAs and as described in regulation.¹ It is not yet adequate to achieve “significant improvement” and is deficient in, among other items, the following crucial respects:

- The development of detailed and realistic strategies, including timelines, to attain a maintenance program that is comparable to those of other large Maryland school systems, taking account of factors that are unique to Baltimore City;
- Provision of accurate, complete, and useful data to support the coordinated identification and prioritization of maintenance actions as well as the claims that replacement and renovation of schools under the Act, as well as closure of 26 facilities, will result in overall facility improvements and a significantly reduced maintenance burden;
- The development of a proposed budget and staffing plan within a *five-year timeframe*, as required by the MOU, that is adequate to the tasks that are faced; or
- The thorough evaluation of the organizational structure to determine if it is efficient and effective.

In general, **the CMP does not recognize that to achieve the level of maintenance that is needed by a major school system like Baltimore City Public Schools, *even in the absence of an opportunity like the MSA-Funded 10-Year Plan*, a complete organizational reform is needed that addresses staffing, organization, procedures, and budget.**

II. Project Execution

City Schools has been approved for a total of \$342.4 million in State funds between FY 2006 and FY 2014, or an average of \$38 M per year, through the Capital Improvement Program (\$286.5 M) and six other programs and initiatives (\$56. M). Of this amount, as of April 1, 2014 \$119.6 M was unexpended, with 37% of this amount representing FY 2012 and earlier funds, including some funds that reach back to FY 2006. \$8.7 M in unexpended FY 2006 – FY 2009 ASP funds cannot be recovered and therefore is not available to be applied to more recent projects. The attached chart compares the expenditure record of City Schools to the four

¹ COMAR 23.03.02.18(A)(1): “A comprehensive maintenance plan is a written plan approved by the local board of education that describes a strategy for maintaining public school facilities.”

largest jurisdictions in Maryland for FY 2006 through April 1 of FY 2014. While the overall expenditures of City Schools are markedly lower than those of Anne Arundel, Baltimore County, and Montgomery County, **the exceptionally low level of City Schools' expenditure of the large FY 2013 allocation suggests that additional State funds should only be allocated to the system with considerable caution.**

The information on the unexpended balance of allocations correlates with information that shows that City Schools takes an exceptionally long time to place State-approved projects under contract as compared to other LEAs, to complete the work once it is contracted, and to seek reimbursement within programs like QZAB. This concern about project management is related to the discussion above about maintenance, because we repeatedly find that maintenance concerns have not been incorporated into design decisions, that unnecessary maintenance burdens have been incurred because contractors are released from their obligations before the work is fully completed, and that building systems that have been installed with State funds have not operated as intended within a short time following project completion due to poor maintenance or to lack of training.

With the recommendation for an additional \$36.1 M for 29 additional systemic renovation projects in the FY 2015 CIP, plus projects in the Aging Schools Program and the Qualified zone Academy Bond programs, we believe that a substantial improvement in the school system's methods of project delivery is urgent. As with the discussion on maintenance in part I of this Agenda item, our expectation is that City Schools will plan, design, procure, construct, and occupy its capital projects at the same levels of timeliness, quality, and cost control that we expect of other school systems in Maryland, and with the attention to maintenance that will protect the value of State and local investments.

III. Recommendations

Based on our review of the resubmitted CMP and our concerns about project delivery, the Designees recommend that the IAC require the following measures as a condition for a) approval of the CMP and b) future recommendations for approval of project funding in the Capital Improvement Program and other State funding programs and initiatives:

1. That City Schools work with the PSCP to revise the CMP to the satisfaction of the PSCP and the IAC, recognizing that the CMP is a fundamental statement of policy as well as a guiding plan for implementation of reform. It is critical that it be fully developed as an accurate, comprehensive, and binding plan that describes the actions that will lead to measurable results that are comparable to those of other large school systems in Maryland.
2. That City Schools work with the PSCP in a bi-weekly meeting structure that will review the status of:
 - a) Every project approved in the annual CIP, ASP, QZAB program, and other State funding programs as they occur, exclusive of projects funded by the Maryland Stadium Authority, which will be reviewed under a separate process;
 - b) Every statement of intention included in the April 4 CMP, particularly those that outline a schedule for implementing the maintenance plan.

Critical City Schools staff members, including the Director of the Facilities Design and Construction Division and the Facilities Maintenance and Operations Division, will be expected to attend every meeting, with appropriate staff; the Chief Operating Officer of

City Schools will be requested to attend selectively. Representatives of the Maryland Stadium Authority and Baltimore City will be invited to attend.

3. That by October 1, 2014, as determined through the process outlined in item 2 above, BCPSS will have:
 - Awarded a contract for design for every systemic renovation project that will be approved by the BPW in the FY 2015 CIP, or will have provided a reasonable explanation for delays. Failure to either contract for design services or to provide a reasonable explanation for delays may result in a recommendation to the IAC for rescission of project approval.
 - Begun the implementation, to the satisfaction of the IAC staff, of:
 - The Comprehensive Maintenance Plan that is described on pages 101-102 of the CMP and the Building Maintenance Plans that are described beginning on page 54 of the CMP;
 - The maintenance metrics that are required by the MOU and are described on pages 55-56 of the CMP, as well as other metrics widely used in the industry and by the other LEAs of Maryland;
 - The Computerized Maintenance Management System (CMMS) that is described on pages 54-56 of the CMP;
 - The energy management and conservation practices that are described beginning on page 69 of the CMP;
 - The staffing increases described beginning on page 89 and elsewhere in the CMP;
 - The inventory of the equipment, building systems, and components of every school building in the system, including those that are scheduled to be closed, described on pages 53-54 and elsewhere in the CMP; and
 - Other plans and goals stated in the CMP that the IAC staff considers are critical to the achievement of a sound, efficient, and effective facility management program in City Schools.

Staff of the IAC will report on the results of these meetings, the status of projects, and the status of implementing the actions in Item 3 above at every IAC meeting. The evaluations of the IAC staff will form a part of the annual report to the Board of Public Works required under Section 10-645(L) of the Act.

Motion:

TO REQUIRE AS A CONDITION FOR A) FUTURE APPROVAL OF THE BALTIMORE CITY PUBLIC SCHOOLS COMPREHENSIVE MAINTENANCE PLAN (CMP) AND B) RECOMMENDATIONS FOR APPROVAL OF PROJECT FUNDING IN THE FY 2015 AND FUTURE CAPITAL IMPROVEMENT PROGRAMS AS WELL AS IN OTHER STATE FUNDING PROGRAMS AND INITIATIVES:

:

1. THAT CITY SCHOOLS SHALL WORK WITH THE PUBLIC SCHOOL CONSTRUCTION PROGRAM TO DEVELOP A CMP COMPARABLE TO THOSE OF OTHER LARGE SCHOOL SYSTEMS IN MARYLAND, TO THE SATISFACTION OF THE PSCP;
2. THAT CITY SCHOOLS SHALL PARTICIPATE IN REGULAR MEETINGS TO BE SCHEDULED AND MANAGED BY THE PUBLIC SCHOOL CONSTRUCTION PROGRAM FOR THE PURPOSES OF ASSESSING THE STATUS OF ALL STATE-FUNDED PROJECTS NOT FUNDED THROUGH MARYLAND STADIUM AUTHORITY BONDS, AS WELL AS THE STATUS OF OTHER FACILITY MANAGEMENT ISSUES THAT ARE ADDRESSED IN THE COMPREHENSIVE MAINTENANCE PLAN; AND
3. TO SHOW PROGRESS TO THE SATISFACTION OF THE IAC DESIGNEES IN THE IMPLEMENTATION OF THE MAINTENANCE PLAN, THE MAINTENANCE METRICS, THE COMPUTERIZED MAINTENANCE MANAGEMENT PLAN, THE BUILDING MAINTENANCE PLANS, THE ENERGY MANAGEMENT PLAN, THE SYSTEMWIDE INVENTORY OF EQUIPMENT, BUILDING SYSTEMS, AND COMPONENTS, AND OTHER PLANS AND GOALS STATED IN THE CMP THAT ARE DEEMED OF IMPORTANCE TO THE DESIGNEES.

THE IAC SHALL REPORT ON THE STATUS OF THESE ISSUES TO THE IAC ON A REGULAR BASIS, AND TO THE BOARD OF PUBLIC WORKS IN THE ANNUAL REPORT REQUIRED IN THE BALTIMORE CITY PUBLIC SCHOOLS CONSTRUCTION AND REVITALIZATION ACT OF 2013.

H. Aging Schools Program: Approval of the Fiscal Year 2015 LEA Allocations

The Aging School Program (ASP) provides State funds to all school systems in the State of Maryland to address the needs of their school buildings. These funds may be utilized for capital improvements, repairs, maintenance and deferred maintenance work at existing public school buildings and sites serving students. These funds may also be used to fund controlled access systems that allow school staff to lock facility doors and control visitor access with cameras, intercom systems and remote buzzers. As in FY 2014, in the *Administrative Procedures* for the FY 2015 Aging Schools Program we will encourage LEAs to examine their security needs for every project in which it is reasonably feasible to carry out the named security enhancements.

The 2014 Capital Budget Bill (SB 171) included funding for the FY 2015 ASP program from State General Obligation Bonds in the amount of \$6.109 million, a decrease of \$2 million below the level of FY 2014 funding. The ASP funds have been distributed by the General Assembly to the LEAs based on each LEA’s proportion of unrenovated pre-1970 square footage and a minimum allocation of \$38,292, in accordance with Education Article, § 5-206(f)(2)(ii) Distribution of Grants - Aging Schools Program.

In addition to the new authorization, the Designees recommend the redistribution of \$1,819,389 from FY 2010, FY 2011, FY 2012 and FY 2013 unexpended allocation balances that remain for 17 LEAs. Since the FY 2010 through FY 2013 funds consist of bond proceeds, the allocations do not expire at the end of the fiscal year. Accordingly, as with CIP allocations, the ASP balances are to be reserved for the specific LEAs to which they were originally allocated.

Because the funding consists of bond proceeds, eligible FY 2015 ASP projects will be restricted to project types that have at least a 15 year anticipated lifespan. Items such as painting and carpet replacement will therefore be excluded for this fiscal year. All other requirements of the Aging Schools Program will apply to FY 2015 approved projects.

Motion:

TO RECOMMEND APPROVAL TO THE BOARD OF PUBLIC WORKS OF THE FISCAL YEAR 2015 AGING SCHOOLS PROGRAM ALLOCATIONS SPECIFIED FOR EACH SCHOOL SYSTEM.

I. Qualified Zone Academy Bond Program: Approval of the Fiscal Year 2015 Preliminary Allocations

The Qualified Zone Academy Bond (QZAB) program provides State funds for projects in schools that meet requirements for issuance of the federal tax-credit QZABs. The funds can be utilized for capital improvements, repairs, maintenance, and deferred maintenance at existing school buildings. These funds may also be used to fund controlled access systems that allow school staff to lock facility doors and control visitor access. As in FY 2014, in the *Administrative Procedures* for the FY 2015 Qualified Zone Academy Bond program we will encourage LEAs to examine their security needs for every project in which it is reasonably feasible to carry out the named security enhancements.

The Federal government authorized \$4,625,000 in tax-credit QZABs for Maryland for 2012. Combined with \$1,804,000 of prior authorization, \$6,429,000 in funding will be available for Fiscal Year 2015. House Bill 190 / Senate Bill 218 authorizes the sale of these bonds, with the program to be administered by the Interagency Committee on School Construction (IAC). Local matching funds otherwise required under Regulation .05 of COMAR 23.03.02 are not required for the actual capital improvement. However, there is a requirement that a contribution from the private or business sector be obtained that is equal to 10 percent of the cost of the project within 14 years from the QZAB issuance.

Public school systems can access these funds through the IAC utilizing procedures that were previously developed for the QZAB program. There are approximately 926 schools in 24 school systems that qualify for this program. Thirteen (13) LEAs submitted applications for FY 2015 funding, and while there are currently eligible schools in all Maryland school districts, 11 school systems (Anne Arundel, Calvert, Caroline, Carroll, Cecil, Harford, Howard, , Somerset, Talbot, Wicomico and Worcester County Public Schools) have chosen not to participate in the FY 2015 program.

The FY 2015 QZAB program continues the revised method of funding allocation that was initiated in 2011 for the FY 2012 QZAB program:¹

- Allocations will be made to five (5) projects at schools identified by the Maryland State Department of Education as Breakthrough Center Schools. These are low-performing schools that receive a concentrated focus of State assistance in order to avoid restructuring under the federal No Child Left Behind law. In some cases, facility improvements are needed to support the technology and other programs that are implemented through the MSDE Breakthrough Center. The QZAB projects requested for these schools were assessed on a non-competitive basis, and all were found to be eligible.
- Allocation of the balance of FY 2015 QZAB funds will be made on a competitive basis, involving an assessment of project priority, scope and eligibility similar to that conducted for projects in the annual Capital Improvement Program.

Based on preliminary review, a tentative list of qualified projects has been developed; the recommended LEA allocations listed below are based on these projects. However, further

¹ In previous years, QZAB allocations were based on each school district's proportion of pre-1970 building area that had not been renovated and its percentage of students eligible for the Free and Reduced Price Meal program. This formulaic approach resulted in over-allocation of funds to certain LEAs that did not have the administrative capacity to manage the difficult QZAB requirements and under-allocation to LEAs that had projects requiring funds larger than the formula permitted, and it contributed to delays in expending the QZAB funds. As a result, in 2011 the General Assembly approved the revised method of allocation.

application material is required, in particular, evidence to support the 10% private entity contribution that is required by federal law. The IAC staff typically requests submission of this material following the Board of Public Works approval of the recommended LEA allocations. Upon receipt of the application materials, project eligibility will be confirmed. If a project proves to be ineligible, the staff will request the LEA to re-submit another project or, if no project is submitted, will request the IAC to recommend a reallocation of the LEA's approved funds to other projects in other jurisdictions.

Motion:

TO RECOMMEND TO THE BOARD OF PUBLIC WORKS THE FY 2015 QUALIFIED ZONE ACADEMY BOND PROGRAM PRELIMINARY ALLOCATIONS SPECIFIED FOR EACH LEA.

(1) Anne Arundel, Calvert, Caroline, Carroll, Cecil, Harford, Howard, Somerset, Talbot, Wicomico and Worcester County Public Schools are not participating in the FY 2015 QZAB program.

J. Capital Improvement Program (CIP): Approval of Recommendations for the Fiscal Year 2015 Capital Improvement Program Allocations and Planning Approvals, the Fiscal Year 2014 Capital Improvement Program Air Conditioning Initiative (CIP-ACI) Allocations, and Reserved funds within the Fiscal Year 2015 Capital Improvement Program

Attached for your consideration are the Designees’ funding recommendations for the Fiscal Year 2015 Public School Construction Capital Improvement Program, as well as for projects funded in whole or in part from the Fiscal Year 2014 Capital Improvement Program Air Conditioning Initiative, for a total of \$319.044 million. Within this total, \$6.477 million is recommended to be allocated from the FY 2014 Air Conditioning Initiative funding for new project applications.

The total recommended allocations consist of:

FY 2015 CIP New Authorization:	\$274,028,534
FY 2014 CIP Air Conditioning Initiative:	\$6,477,000
Prior year CIP Reverted Statewide Contingency Funds:	\$38,538,719
Total:	\$319,044,253

An additional \$971.5 thousand remains to be allocated from the new bond authorization of \$275 million. Howard County Public Schools (HCPS) has requested IAC consideration for two roof replacement projects that the Designees consider to be ineligible because the school system could not provide the three most recent roofing inspection reports to support the request. Please see the attached letter from HCPS. The IAC policy that requires the three most recent roofing reports is of long standing and of considerable importance, because the integrity of the roof is a major factor in protecting the interior of the building and the health and welfare of its occupants. The IAC staff made it clear in Instructions issued in July 2013 that no exceptions would be made to this policy in the FY 2015 CIP.

The Designees do not recommend these projects to be recommended to the Board of Public Works. However, in deference to the judgment of the IAC, the Designees have reserved \$971.5 thousand that could be applied to the two HCPS roofing projects, or could be used for other eligible projects in the FY 2015 CIP.

Motion:

TO RECOMMEND TO THE BOARD OF PUBLIC WORKS APPROVAL OF THE FISCAL YEAR 2015 CAPITAL IMPROVEMENT PROGRAM ALLOCATIONS AND PLANNING APPROVALS SPECIFIED FOR EACH SCHOOL SYSTEM IN THE ATTACHED DOCUMENTS DATED APRIL 17, 2014 IN THE AMOUNT OF \$319.044 MILLION, CONSISTING OF APPROXIMATELY \$274. MILLION IN NEW BOND AUTHORIZATION IN ACCORDANCE WITH THE MARYLAND CONSOLIDATED CAPITAL BOND LOAN OF 2014, APPROXIMATELY \$6.477 MILLION IN CAPITAL IMPROVEMENT PROGRAM FUNDS FOR AIR CONDITIONING PROJECTS IN ACCORDANCE WITH THE MARYLAND CONSOLIDATED CAPITAL BOND LOAN OF 2013, AND APPROXIMATELY \$38.6 MILLION IN RESERVED FUNDS.

K. FY 2011 Maintenance Survey Report

At its April 19, 2007 meeting, the IAC requested the PSCP staff to develop a reporting format summarizing the outcome of the maintenance surveys for each school system. This was to be the basis of a yearly report to be produced by our maintenance survey staff.

The IAC is requested to review the attached draft of the annual Maintenance Survey Report of surveys performed in FY 2011, and to provide comments to the PSCP prior to April 22, 2014. The FY 2011 report is intended to be of limited scope, as will be the FY 2012 report that will be forwarded to you for your review within a few days. We will present final FY 2011 and FY 2012 reports to the IAC for approval at the meeting of April 29, 2014. The final reports will be presented to the BPW at a subsequent date. A comprehensive analysis and discussion of findings for the three fiscal years FY 2011 through FY 2013, including a discussion of trends, will be included in the FY 2013 annual report. That report will also include the final results for the first full round of Maryland school inspections, conducted between FY 2007 and FY 2013.

L. CAPITAL IMPROVEMENT PROGRAM AMENDMENTS TO PLANNING AND FUNDING APPROVALS

1. Capital Improvement Program: Amendments to the Fiscal Year 2013 CIP, Prince George’s County

Stephen Decatur Middle School was approved for local planning as a renovation project in the FY 2013 Capital Improvement Program (CIP) (PSC #16.143.13 LP). Based on a revised assessment of the facility, the program needs, and the enrollments, the LEA requests rescission of the FY 2013 CIP planning approval. The project remains a priority to the LEA and will be submitted in the FY 2016 CIP as a new request for an Addition/Renovation project which will incorporate a special education program into the school.

Motion:

TO APPROVE THE RESCISSION OF PLANNING APPROVAL FOR STEPHEN DECATUR MIDDLE SCHOOL RENOVATION PROJECT PSC #16.143.13 LP IN PRINCE GEORGE’S COUNTY AND TO AMEND THE FY 2013 CAPITAL IMPROVEMENT PROGRAM TO REFLECT THIS CHANGE.

IAC ACTION: THE ABOVE REFERENCED ITEMS WERE:					
	Approved	Disapproved	Deferred	Abstain	Recuse

Mr. Tim Maloney	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

2. Capital Improvement Program: Amendments to the Fiscal Year 2013 CIP, Harford County

Havre de Grace High School was approved for funding for a roof replacement project in the FY 2013 Capital Improvement Program (CIP) (PSC #12.005.13 SR). Since the date of approval of the roof project, the Harford County Board of Education has decided to replace the middle and high schools with a combined middle/high school. On February 20, 2014, the IAC recommended local planning approval for the replacement project in the FY 2015 CIP.

The LEA requests rescission of the FY 2013 roof replacement project allocation of \$830,000. The Designees recommend that the FY 2013 funding be reverted and reserved for Harford County for use in the FY 2015 CIP.

Motion:

TO APPROVE THE RESCISSION OF FY 2013 FUNDING APPROVAL IN THE AMOUNT OF \$830,000 FOR THE HAVRE DE GRACE HIGH SCHOOL SYSTEMIC RENOVATION ROOF REPLACEMENT PROJECT PSC #12.005.13 SR IN HARFORD COUNTY AND TO AMEND THE FY 2013 CAPITAL IMPROVEMENT PROGRAM TO REFLECT THIS CHANGE, WITH THE REVERTED FUNDS TO BE RESERVED FOR HARFORD COUNTY PUBLIC SCHOOLS FOR APPLICATION TO THE FY 2015 CAPITAL IMPROVEMENT PROGRAM.

M. PRINCE GEORGE'S COUNTY AGING SCHOOLS PROGRAM (ASP) FY 2013 REIMBURSEMENT EXTENSION REQUESTS

Prince Georges County Public Schools (PGCPS) has requested a four-month extension to the December 1, 2013 reimbursement deadline for repair to the parking lots at Annapolis Road Academy PSC #16.163.13 ASP and Woodridge Elementary School PSC #16.052.13 ASP, and for repairs to the exhaust fans at John Hanson French Immersion PSC #16.136.13 ASP. The LEA states that work was delayed due to weather issues, procurement of materials, and coordination with school activities and program schedules.

The Designees recommend granting a four-month extension to the ASP reimbursement deadline to allow PGCPS time to complete the projects and execute the requisite documentation, so that the projects can be eligible for reimbursement at completion.

Motion:

TO APPROVE AN EXTENSION OF FOUR MONTHS TO THE REIMBURSEMENT DEADLINE FOR THE ANNAPOLIS ROAD ACADEMY PSC #16.163.13 ASP, THE WOODRIDGE ELEMENTARY SCHOOL PSC #16.052.13 ASP PARKING LOT REPAIRS, AND THE JOHN HANSON FRENCH IMMERSION PSC #16.136.13 ASP EXHAUST FAN REPAIR PROJECTS, SO THAT THE PROJECTS CAN BE COMPLETED AND WILL BE ELIGIBLE FOR REIMBURSEMENT TO PRINCE GEORGE'S COUNTY PUBLIC SCHOOLS FROM THE FY 2013 AGING SCHOOLS PROGRAM FUNDS.

Mr. Tim Maloney	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

SECTION II-DISCUSSION ITEMS AND DEFERRED ITEMS

The IAC granted a four-month extension on October 27, 2013 to Prince Georges County Public Schools (PGCPS) for the Catherine T. Reed Elementary PSC #16.144.13 ASP abatement and pipe insulation project. However, due to scheduling conflicts with school activities, the LEA was not able to complete the project within that timeframe and consequently requests an additional two-month time extension to the December 1, 2013 reimbursement deadline.

The Designees recommend granting a six-month extension to the original ASP reimbursement deadline to allow PGCPS time to complete the project and execute the requisite documentation, so that the project can be eligible for reimbursement at completion.

Motion:

TO APPROVE AN EXTENSION OF SIX MONTHS TO THE REIMBURSEMENT DEADLINE FOR THE CATHERINE T. REED ELEMENTARY SCHOOL PSC #16.144.13 ASP, ABATEMENT AND PIPING REPLACEMENT PROJECTS, SO THAT THE PROJECT CAN BE COMPLETED AND WILL BE ELIGIBLE FOR REIMBURSEMENT TO PRINCE GEORGE'S COUNTY PUBLIC SCHOOLS FROM THE FY 2013 AGING SCHOOLS PROGRAM FUNDS.

N. PRINCE GEORGE'S COUNTY AGING SCHOOLS PROGRAM (ASP) FY 2013 REIMBURSEMENT EXTENSION REQUESTS

Prince Georges County Public Schools (PGCPS) has requested a nine month extension to the December 1, 2013 reimbursement deadline for the Ceiling/Piping project at John Bayne Elementary School PSC #16.126.13 ASP. The LEA initially anticipated completion of this project by the December 2013 deadline, however it was discovered that extensive asbestos abatement would be required before the lighting, ceiling and pipe replacements can occur. The LEA has indicated that it will be safer to delay the project to the summer break, utilizing the longer timeframe to open up the ceiling areas and complete the abatement of the asbestos containing materials. Postponing the project until the summer break will provide the contractor ample time to conduct asbestos abatement and building material replacement, ensuring the safety of the school occupants and preventing a potential HAZMAT contamination.

The Designees recommend granting a nine-month extension to the ASP reimbursement deadline to allow PGCPS time to complete the project and execute the requisite documentation, so that the project can be eligible for reimbursement at completion.

Motion:

TO APPROVE AN EXTENSION OF NINE MONTHS TO THE REIMBURSEMENT DEADLINE FOR THE JOHN BAYNE ELEMENTARY SCHOOL PSC #16.126.13 ASP CEILING/PIPING PROJECT, SO THAT THE PROJECT CAN BE COMPLETED AND WILL BE ELIGIBLE FOR REIMBURSEMENT TO PRINCE GEORGE'S COUNTY PUBLIC SCHOOLS FROM THE FY 2013 AGING SCHOOLS PROGRAM FUNDS.

	WITH DISCUSSION	WITHOUT DISCUSSION			

A. Montgomery County

William H. Farquhar Middle School

The Montgomery County Board of Education (MCBOE) requests IAC approval for the acquisition of the 17.11-acre site located at 17095 Batchellors Forest Road, Olney Maryland 20832. The tract, presently known as Batchellors Forest, Parcel A, is privately owned but has an open space easement on it held by the Maryland National Capital Park and Planning Commission (M-NCPPC).

The Board of Education will acquire the property through condemnation. The 20.03 acre existing William H. Farquhar Middle School site owned by the MCBOE will be given to the M-NCPPC with an understanding that the existing school will be demolished and the area will be re-graded for future park use. The sites to be exchanged are contiguous.

The MCBOE contends that a replacement school on the existing school site was not planned because there is not enough room to maintain the existing building and construct the new replacement school on the same site. The MCBOE further declares a replacement school on the existing site is not feasible due to steep slopes and other safety concerns associated with the need to separate pedestrians, buses and cars from each other, as well as the need to reduce costs and operational impacts by leaving the students in their current location while construction of a new school is underway. The construction of the middle school is expected to be completed in July of 2016. The school is expected to accommodate 796 students in grades 6th – 8th, with a design capacity of 1,000.

While this school is located outside of the Priority Funding Area, after careful examination of design documents by staff it was concluded that additional capacity will not be built, therefore a Priority Funding Area waiver is not needed.

Land Use

- 12.77 acres are deemed usable.
- The current zoning of the area is RNC (Rural Neighborhood Cluster). Rezoning is not required.
- The site is most accessible from Batchellors Forest Road. The road is a Montgomery County Rustic Road, which has a right-of-way that will be preserved and maintained.
- Sidewalks will be provided.
- The MCBOE will comply with the separation of pedestrians, buses, and cars to maximize on-site safety.

Infrastructure

- There are existing water and sewage lines under Batchellors Forest Road. The current water/sewage designation for the site is pending confirmation from the Montgomery County Public Schools, M-NCPPC and the County's Well and Septic Section on whether the current designation for the parcel is W-6 and S-6 (no public service planned) or W-3 and S-3 (public service planned and allowed). If the designation is W-6 and S-6, the change in designation can be handled as either a modification to the existing category or through an Administrative Change.
- Electric service is available.
- Fire hydrants will be provided on site. The Sandy Spring Volunteer Fire Department is 1.8 miles from the existing site.
- There is an existing gas line on site.

Environmental and Natural Settings

- The site does not lie within the 100-year floodplain.
- The isolated wetlands will not be disturbed.
- Storm water management and sediment control measures will be required.
- Retaining walls and grading will be used to provide the necessary site slopes and to meet ADA requirements while providing adequate drainage away from the planned school building.
- A Forest Conservation Plan (FCP) has been approved for the site with 2.44 acres of forest present on the eastern and southern boundaries of the school site. This forested area will be preserved and protected.
- The project will result in noise and discharge into the air. The project will also affect ambient air quality or produce disagreeable air color.
- There are no waterways on the site.
- There are no hydric soils on site.
- There are no known rare, threatened or endangered species on this site.

Approval of this site is recommended by means of the following motion:

Motion:

TO APPROVE THE ACQUISITION BY THE MONTGOMERY COUNTY BOARD OF EDUCATION OF THE WILLIAM H. FARQUHAR MIDDLE SCHOOL SITE LOCATED AT 17095 BATCHELLORS FOREST ROAD, OLNEY MARYLAND 20832, ADHERING TO THE ACTIONS IDENTIFIED BY THE MARYLAND DEPARTMENTS OF THE ENVIRONMENT AND TRANSPORTATION AND THE MARYLAND HISTORIC TRUST IN THE STATE CLEARINGHOUSE REVIEW, STATE IDENTIFIER MD20131220-0876, ATTACHED.

A. FACILITIES STATUS CHANGE SUMMARY

1. LEA: Baltimore County
School: Eastwood Primary Center
428 Westham Way
Baltimore, MD 21224
2. Date of Closure: 8/13
3. Building data: Site data:
 1. State Rated Capacity 197
 2. Building sq. ft. 38,515
 - a. 9.3 acres
 - b. 9.31 acres involved in transaction
4. Original construction date 1963
5. Change involved: Closure and transfer to Baltimore County Government.
6. IAC and BPW approval history:
 1. IAC 1 _____
 2. IAC 2 _____
 - c. BPW 1
 - BPW 2

Proposed change or reuse: The facility was closed for educational purposes in August 2013. The property will be transferred to the Baltimore County Government and it will convert the property and building to another use. The Eastwood Primary Center's magnet program was consolidated with Norwood Elementary School and Holabird Middle School to become a single program housed in two (2) buildings separated by Delvale Avenue. The consolidated program consists of a kindergarten through grade 8 science, technology, engineering, and mathematics (STEM) magnet program. The Norwood building currently houses students from pre-kindergarten to third grade, and the Holabird building currently houses students in grades 4 to 8.

7. State investment in building and/or site? Yes
8. Outstanding State bond debt? Yes
Amount \$ _ as of 7/1/13
Debt (being paid) (to be paid) by County \$268,837
9. Additional comments and recommended IAC action.

Motion:

TO APPROVE THE CLOSURE OF EASTWOOD PRIMARY CENTER LOCATED AT 428 WESTHAM WAY IN BALTIMORE COUNTY FOR EDUCATIONAL PURPOSES AND TO RECOMMEND BOARD OF PUBLIC WORKS APPROVAL OF TRANSFER OF THE PROPERTY BY THE BALTIMORE COUNTY BOARD OF EDUCATION TO THE BALTIMORE COUNTY GOVERNMENT.

Motion:

TO RECOMMEND TO THE BOARD OF PUBLIC WORKS THE APPROVAL OF THE LEASE AGREEMENT BETWEEN QUEEN ANNE’S COUNTY GOVERNMENT AND SUDLERSVILLE FIRE COMPANY INC. FOR THE FORMER SUDLERSVILLE MIDDLE SCHOOL LOCATED AT 201 N. CHURCH STREET, SUDLERSVILLE, MD. 21668 FOR A THREE (3) YEAR TERM COMMENCING UPON STATE APPROVAL FOR A NOMINAL FEE OF \$ 1.00 PER YEAR.

C. 1. Prince George’s County – Cancellation of Contract Approval and Rescission of Funding Approval

Samuel Ogle Middle – Unit Ventilators
PSC #16.201.12 SR and

Bond Mill Elementary - Unit Ventilators
PSC #16.233.12 SR

On August 15, 2012, the IAC approved contracts between Prince George’s County Public Schools (PGCPS) and Beltsville Industries Group, Inc. in the amounts of \$530,000 for the unit ventilator replacement project at Samuel Ogle Middle (PSC #16.201.12 SR) and \$307,000 for the unit ventilator replacement project at Bond Mill Elementary (PSC #16.233.12 SR).

The Public School Construction Program received a letter dated March 20, 2014, from PGCPS explaining that the contractor declined the awards in November 2012 because they could not complete the scopes of work for the bid prices. Further correspondence dated April 3, 2014 described the efforts that PGCPS made from December 2012 to May 2013 to place the projects under contract by May 31, 2013, without success. PGCPS failed to notify the IAC of the contractual changes at the time of the events and also failed to request rescission of the project funds (an action that would have allowed the school system to retain the funds for application to eligible projects in a prior year CIP or in the FY 2014 CIP).

Since these contracts were not executed, the projects were considered to be uncontracted as of May 31, 2013. For projects approved in May 2011 for the FY 2012 CIP, the deadline for encumbering the projects by the local board was May 31, 2013. §5-301(j)(3) of the Education Article; COMAR 23.03.02.09. The Designees recommend that funding for these FY 2012 projects be rescinded and transferred to the Statewide Contingency Account. However, the Designees also recommend that, in light of the efforts made by Prince George’s County Public Schools to place the two projects under contract by the deadline, and in recognition of organizational and structural changes that have taken place within the school system under new leadership to improve the management of school construction projects (including improved communication with the IAC), the Board of Education of Prince George’s County be offered the opportunity to request application of the funds to an eligible project in the FY 2014 CIP.

There have been no LEA or State expenditures for these projects at this time.

Motion:

TO APPROVE THE CANCELLATION OF THE AWARD OF CONTRACT TO BELTSVILLE INDUSTRIES GROUP, INCORPORATED FOR THE UNIT VENTILATOR REPLACEMENT PROJECTS AT SAMUEL OGLE MIDDLE PSC #16.201.12 SR AND BOND MILL ELEMENTARY PSC #16.233.12 SR IN PRINCE GEORGE’S COUNTY, AND TO APPROVE THE RESCISSION OF THE FY 2012 FUNDING IN THE AMOUNT OF \$708,000 FOR SAMUEL OGLE MIDDLE PSC #16.201.12 SR AND IN THE AMOUNT OF \$423,000 FOR BOND MILL ELEMENTARY PSC #16.233.12 SR, REVERTING A TOTAL OF \$1,131,000 TO THE STATEWIDE CONTINGENCY ACCOUNT WITH AN UNDERSTANDING THAT THE SCHOOL SYSTEM MAY REQUEST THE APPLICATION OF THESE FUNDS TO AN ELIGIBLE PROJECT IN THE FY 2014 CIP.

C. 2. Baltimore City – Cancellation of Contract Award

#402 Northern High – Media Center Renovation
PSC #30.174.12QZAB and

#075 Calverton PK-8 – Auditorium Renovation
PSC #30.184.12 QZAB

On August 15, 2012, the IAC approved a contract in the amount of \$450,000 for the Media Center Renovation project at #402 Northern High (PSC #30.174.12 QZ) to J.A.K. Construction Company, Inc. and a contract in the amount of \$746,446 for the Auditorium Renovation project at #075 Calverton PK-8 (PSC #30.184.12 QZ) to JLN Construction Services, LLC. These projects are being requested for cancellation based on Baltimore City's revised 10-year plan approved in December. These buildings will not remain in Baltimore City's portfolio for the life of the bonds. (See Section III Item dated August 12, 2012).

There have been no LEA or State expenditures for this project at this time.

MOTION:

TO APPROVE THE CANCELLATION OF THE AWARD OF CONTRACT TO J.A.K. CONSTRUCTION COMPANY, INC. FOR THE #402 NORTHERN HIGH PSC #30.174.12QZ MEDIA CENTER RENOVATION PROJECT AND TO JLN CONSTRUCTION SERVICES, LLC FOR THE #075 CALVERTON PK-8 PSC #30.184.12QZ AUDITORIUM RENOVATION PROJECT IN BALTIMORE CITY PUBLIC SCHOOLS.

A. APPROVAL TO ESTABLISH SUPPLEMENTARY APPROPRIATION PROJECT ALLOCATIONS

In the 2011 legislative session, the General Assembly approved an FY 2012 Supplementary Appropriation (SA) in the total amount of \$47.5 million. Projects in this program are subject to approval by the Board of Public Works (BPW) following evaluation by the Designees. Once approved, these projects are subject to the procurement and design review requirements that apply to projects in the Capital Improvement Program (CIP) or Aging Schools Program (ASP).

On April 8, 2014, the BPW approved the realignment of unexpended funds from Sykesville Middle to William Winchester Elementary to adjust for the higher construction costs at William Winchester Elementary.

<u>Project Name</u>	<u>PSC Number</u>	<u>Project Type</u>	<u>Amount</u>
<u>Carroll</u>			
William Winchester Elementary	06.025.12SA SR	Emergency Generator	\$ 9,141
Sykesville Middle	06.029.12SA SR	Emergency Generator	(9,141)
			<u>\$ -</u>
TOTAL SA ALLOCATIONS:			<u>\$ -</u>

On February 12, 2014, the BPW approved the realignment of funds from the St. Mary's County LEA Contingency Reserve to the following eligible projects to account for increased change orders costs:

<u>Project Name</u>	<u>PSC Number</u>	<u>Project Type</u>	<u>Amount</u>
<u>St. Mary's</u>			
Chopticon Elementary	18.019.12SA SR	Lighting	\$ 11,038
Great Mills High	18.020.12SA SR	Lighting	6,876
Leonardtown High	18.004.12SA SR	Lighting	1,117
			<u>\$ 19,031</u>
TOTAL SA ALLOCATIONS:			<u>\$ 19,031</u>

In order for the Public School Construction Program to respond to requests for reimbursement and change orders for these projects, funds must be transferred within Carroll County and from the St. Mary's County LEA Reserve Contingency Account, and individual project allocations must be adjusted.

MOTION:

TO APPROVE THE TRANSFER OF \$19,031 FROM THE FY 2012 SUPPLEMENTARY APPROPRIATION ACCOUNT AND TO ADJUST INDIVIDUAL PROJECT ALLOCATIONS FOR THE PROJECT ADJUSTMENTS APPROVED BY THE BOARD OF PUBLIC WORKS ON FEBRUARY 12 AND APRIL 8, 2014 AS SHOWN ABOVE.

No announcements.

Respectfully submitted,

A handwritten signature in black ink that reads "Helen McCall". The signature is fluid and cursive, with a long horizontal line extending to the right.

Helen McCall
Recording Secretary

A handwritten signature in blue ink that reads "David G. Lever". The signature is cursive and includes a large initial "D" and a stylized "L".

APPROVED:

David Lever
Executive Director

106 – EMERGENCY SHELTER COMPLIANCE PROCESS

106.1 GENERAL

- A. COMAR 23.03.02.29 states that for every school that undertakes a project involving a replacement or upgrade of the electrical system, the Local Educational Agency (LEA) is required to consult with the Maryland Emergency Management Agency (MEMA) to determine which area of the school may be used for public shelter during a national, state, or local emergency event. In addition, the public school construction project is to include the electrical capability to fully power those areas designated by MEMA.
- B. Purpose. The following steps outline the specific process that the Interagency Committee on School Construction (IAC) will require all LEAs to complete in order to comply with the COMAR regulation 23.03.02.29.
- C. Definitions.
 - 1. See Administrative Procedures Guide (APG) Appendix 106 Emergency Shelter Compliance Process, Paragraph A.
 - 2. Emergency Shelter Compliance Process: All steps described in Section 106.4 below. These steps are applicable to all projects that involve electrical work, whether determined to be subject to the Emergency Shelter Requirement or not.
 - 3. Emergency Shelter Requirement: All steps described in Sections 106.4.B.2 through 106.4.F below, applicable to projects that are determined to involve an Upgrade or Replacement of the electrical system as defined in Appendix 106, and resulting in a facility that can be used for public shelter during a national, state, or local emergency event, and which is fully powered in the areas designated by MEMA.

106.2 REFERENCE

- A. COMAR 23.03.02.29

106.3 APPLICABILITY

- A. This procedure is applicable to all projects that receive State funding participation in the Capital Improvement Program (CIP), the Aging Schools Program (ASP), the Qualified Zone Academy Bond (QZAB) program, and other State funding programs, that involve electrical work, irrespective of whether they are determined to be subject to the Emergency Shelter Requirement or not.
- B. The criteria set forth in APG Appendix 106 Emergency Shelter Compliance Process, Paragraphs B and C are to be used for guidance only; final determinations as to the Emergency Shelter Requirement will be made by the Public School Construction Program in collaboration with MEMA, the Department of Human Resources (DHR), and others.

106.4 STEPS OF THE EMERGENCY SHELTER COMPLIANCE PROCESS

- A. General

**FINAL DRAFT FOR IAC APPROVAL
APRIL 17, 2014**

1. Upon completion of each step of the Emergency Shelter Compliance Process, the party responsible for completing that step must record the date of completion in the PSCP SharePoint list. Guidance will be provided for the use of SharePoint.
 2. LEAs are encouraged to complete the Pre-Application Emergency Shelter Compliance Process (106.B below) as early as possible before submission of application to the IAC for approval of planning and/or funding.
 - a. IAC Recommendations for Project Approval:
 - i. No project that is determined to be subject to the Emergency Shelter Requirement will be recommended for final planning and/or funding until steps 106.4.B.2 through 106.4.B.5 of the required Compliance Process are complete.
 - ii. If progress is demonstrated toward completion of steps 106.4.B.2 through 106.4.B.5 of the required Compliance Process, the IAC may recommend conditional approval, subject to completion of the Compliance Process steps prior to final Board of Public Works approval of the annual Capital Improvement Program.
 - b. Projects that are determined to be subject to the Emergency Shelter Requirement but have been submitted for planning approval or funding approval prior to completion of steps 106.4.B.2 through 106.4.B.5 will be reviewed without prejudice for compliance with other IAC requirements, but will not be recommended for final approval until the steps are completed.
- B. Pre-Application Process Prior to Application for State Approval of Planning and/or Funding
1. LEA makes an initial assessment as to whether the project is required to meet the Emergency Shelter Requirement based on the criteria for Upgrade or Replacement of the electrical system as set forth in APG Appendix 106, Paragraph C. Consultation with the IAC-PSCP is strongly encouraged.
 - a. If the LEA considers that the project is not required to meet the Emergency Shelter Requirement:
 - i. If the IAC agrees, no further action is needed. IAC will add a note to the project's application file indicating that the project is compliant with the Emergency Shelter Compliance Process, and no other actions under the Process are necessary.
 - ii. Upon review of the application, IAC may determine that the project must meet the Emergency Shelter Requirement. The project will then proceed under steps 106.4.B.2 through 106.4.F below.
 - iii. For projects in which it is unclear if the project involves Replacement or Upgrade of the electrical system as defined in Appendix 106, IAC will discuss applications with the LEA during the pre-application or application processes, and may require reconsideration of the application or additional information.
 - b. If the LEA considers that the project is required to meet the Emergency Shelter Requirement, the Emergency Shelter Compliance Process will continue under steps 106.4.B.2 through 106.4.F below.
 2. LEA Contacts the Director of the Preparedness Directorate at MEMA to formally ask for a site survey of the facility and submits to MEMA's Preparedness Director (copy to PSCP) documentation required to complete the Emergency Shelter Compliance Process. Documentation required prior to a site survey is as follows:

- a. Floodplain map of facility site
 - b. Site plan showing the relation of the facility to roads, sidewalks and various exterior features;
 - c. Floor plan of any existing or planned structures involved in the project; and
 - d. Any documentation that the LEA or other local parties wish to be considered in making a determination under 106.4.B.5.b below.
3. MEMA schedules site visit:
- a. The MEMA Regional Liaison Officer coordinates the performance of a site visit and walkthrough which will occur 2-3 weeks after MEMA was first contacted by the LEA. MEMA enters the date of the site visit into the SharePoint list.
 - b. Site visits and walkthroughs are to be held at the project site, unless the parties designated in 106.4.B.3.c below agree that the purposes of the regulation are better served by meeting at the offices of the LEA.
 - c. The site visit will include representatives from the following:
 - i. Department of Human Resources (DHR) – Office of Emergency Operations (OEO);
 - ii. Maryland Emergency Management Agency (MEMA) – Regional Liaison Officer (RLO); and
 - iii. Local Educational Agency (LEA).
 - d. The Local Emergency Manager (LEM) will be invited to participate in the site visit.
 - e. The site visit may also include representatives from the following:
 - i. Local Department of Social Services (DSS);
 - ii. Public School Construction Program (PSCP); and/or
 - iii. Other relevant organizations as necessary.
 - f. MEMA's Preparedness Director must have received the required documents listed in subparagraph 2 before the site visit can occur.
 - g. MEMA and DHR will provide information on current shelter guidance and best practices under consideration in section 106.4.B.4.c below to meeting participants at the time that the meeting is scheduled.
4. Site Visit and Walkthrough. The site visit and walkthrough is performed by the personnel outlined in subparagraph 3; the maximum time expected is 2-3 hours.
- a. Site visits and walkthroughs will contain informal discussions regarding the identification of those areas that would be used for sheltering before, during, or after an emergency event, and the requirements for back-up power.

**FINAL DRAFT FOR IAC APPROVAL
APRIL 17, 2014**

- b. These discussions will not constitute formal guidance or decisions of any kind; formal guidance and decision will be provided in the Emergency Shelter Compliance letter (see subparagraph 5).
 - c. Criteria for consideration will be drawn from Federal and State Emergency Management guidance and plans, and nationwide best practices.
5. MEMA submits Emergency Shelter Compliance Letter to LEA:
- a. MEMA and DHR will work in close coordination to complete a formal letter which designates the area that is to be fully powered pursuant to COMAR 23.03.02.29. This designation is to be made on the best professional judgment of MEMA and DHR about which portions of the building would be used for public sheltering if events require use of this facility.
 - b. MEMA and DHR will consider any evidence that the facility could not be safely used under any circumstances as a public shelter in the foreseeable future. If this evidence of lack of safety under all circumstances for the foreseeable future is compelling, then no areas of the facility are to be designated as necessary for public safety when used as a public shelter.
 - c. MEMA will submit the letter to the LEA and copy the PSCP, DHR, DGS and the LEM within four weeks of the site visit.
 - i. This letter will include a floor plan with shelter areas highlighted for the LEA's reference.
 - ii. MEMA will upload the letter to the PSCP SharePoint portal and enter the date of the compliance letter in the SharePoint list.
- C. Application for Planning Approval and/or Funding. LEA submits application for a school construction project to IAC.
- 1. LEA indicates on application if project requires a Replacement of the electrical system or an Upgrade of electrical system.
 - 2. For projects that are considered by the LEA to be subject to the Shelter Compliance Requirement, or for projects which the IAC has determined are subject to the Shelter Compliance Requirement under 106.4.B.1.a above, LEA includes the MEMA Emergency Shelter Compliance Letter (106.4.B.5 above) in the application.
 - 3. IAC will require completion of the Emergency Shelter Compliance Process as a condition for approval of the project.
- D. Project Application Data .
- 1. In order to maintain accountability and transparency throughout the entire process, PSCP will immediately make application data specific to electrical and emergency shelter information available through the PSCP SharePoint portal.
 - 2. Reports of application status, site visit reports, and other relevant information will be made available as needed.
- E. Construction design plans with backup power capabilities submitted to IAC.
- 1. Following project approval, LEAs will submit design plans to the IAC-MSDE and IAC-DGS which include provisions to fully power those areas designated in the Emergency Shelter Compliance Letter from MEMA. These plans must clearly indicate which specific electrical

devices/mechanisms support backup power, thereby distinguishing them from other devices/mechanisms in close proximity which do not.

2. PSCP will review the design plans and cross-reference them with the MEMA Emergency Shelter Compliance Letter and attached floor plan to ensure total compliance with the regulation.
3. IAC-DGS will note any questions or deficiencies; when addressed in the LEA response, IAC-DGS will notify LEA.

F. LEA submits final project close-out documents for approval. Following the completion of construction the LEA will submit final project close-out documents to the IAC-PSCP for approval, including proof of backup power installation. The close-out documents must be signed by the superintendent or the superintendent's designee, verifying compliance with the Emergency Shelter Requirement.

106.5 CONTINGENCIES

A. Appeal of MEMA's Decision

1. LEA may request an appeal of MEMA's School Emergency Shelter Compliance decision concurrently to MEMA and the IAC. Requests for consideration should be addressed to:
 - a. MEMA: Director of the Preparedness Directorate; and
 - b. IAC: Executive Director (copy Executive Director's Assistant).
2. The LEA will then be asked to replicate the Process outlined in Section 106.B.2 – 4. MEMA will coordinate an additional site assessment in accordance with Section 106.B.4.
3. The Executive Director of MEMA will then make the final determination based on both site assessments and any additional information provided by the LEA.
4. MEMA will send a final Emergency Shelter Compliance Letter to the LEA and upload the letter to SharePoint.

B. Accelerated Emergency Shelter Compliance Process

1. In the event that an urgent school construction project is submitted to the PSCP, there may be a need to accelerate the Emergency Shelter Compliance Process. All appeals to accelerate the Process will be made to the IAC directly.
2. The following changes will occur in the accelerated Process:
 - a. LEA will indicate upon its first contact with MEMA that this is an accelerated project.
 - b. The site visit will be conducted within 1-2 weeks after the LEA contacts MEMA.
 - c. MEMA's Emergency Shelter Compliance Letter will be completed 3-4 weeks after the site visit.
3. The IAC shall make the determination as to which projects are "Urgent" based on internal criteria and comparisons with other project applications.

END OF SECTION

APPENDIX 106 – EMERGENCY SHELTER COMPLIANCE PROCESS

A. Definitions

1. Branch Circuit: The circuit conductors between the final overcurrent device protecting the circuit and the outlet(s).
2. Circuit Breaker: A device designed to open and close a circuit by nonautomatic means and to open the circuit automatically on a predetermined overcurrent without damage to itself when properly applied within its rating.
3. Communications Equipment: The electronic equipment that performs the telecommunications operations for the transmission of audio, video, and data, and includes power equipment (e.g., dc converters, inverters, and batteries), technical support equipment (e.g., computers), and conductors dedicated solely to the operation of the equipment.
4. Equipment: A general term, including fittings, devices, appliances, luminaires, apparatus, machinery, and the like used as a part of, or in connection with, an electrical installation.
5. Feeder: All circuit conductors between the service equipment, the source of a separately derived system, or other power supply source and the final branch-circuit overcurrent device.
6. Fully Power: Capability to provide electrical power to the fixtures, services, appliances, and/or outlets within a specified facility or portion of a facility.
7. Motor Control Center: An assembly of one or more enclosed sections having a common power bus and principally containing motor control units.
8. Nonautomatic: Requiring human intervention to perform a function.
9. Outlet: A point on the wiring system at which current is taken to supply utilization equipment.
10. Overcurrent Protective Device, Branch-Circuit: A device capable of providing protection for service, feeder, and branch circuits and equipment over the full range of overcurrents between its rated current and its interrupting rating. Such devices are provided with interrupting ratings appropriate for the intended use but no less than 5000 amperes.
11. Panelboard: A single panel or group of panel units designed for assembly in the form of a single panel, including buses and automatic overcurrent devices, and equipped with or without switches for the control of light, heat, or power circuits; designed to be placed in a cabinet or cutout box placed in or against a wall, partition, or other support; and accessible only from the front.
12. Premises Wiring System: Interior and exterior wiring, including power, lighting, control, and signal circuit wiring together with all their associated hardware, fittings, and wiring devices, both permanently and temporarily installed. This includes (a) wiring from the service point or power source to the outlets or (b) wiring from and including the power source to the outlets where there is no service point. Such wiring does not include wiring internal to appliances, luminaires, motors, controllers, motor control centers, and similar equipment. Power sources include, but are not limited to, interconnected or stand-alone batteries, solar photovoltaic systems, other distributed generation systems, or generators.
13. Replacement of the Premises Wiring System: Complete new premises wiring system is installed in an existing facility or major portion of an existing facility, including when components of the pre-existing system are either removed or abandoned in place.

14. Replacement of the Electrical System: A complete new electrical system is installed in an existing or new facility, including when major components of the pre-existing electrical system are either removed or abandoned in place. Electrical system replacement includes, but is not limited to, medium and low voltage switchgears, medium and low voltage transformers, unit substations, low voltage switchboards, distribution panelboards, motor control centers, and branch circuit panelboards.
15. Replacement of the Service Equipment: A complete new electrical service is installed in an existing or new facility, including when major components of the pre-existing electrical service are either removed or abandoned in place.
16. Service: The conductors and equipment for delivering electric energy from the serving utility to the wiring system of the premises served.
17. Service Conductors: The conductors from the service point to the service disconnecting means.
18. Service-Entrance Conductors, Overhead System: The service conductors between the terminals of the service equipment and a point usually outside the building, clear of building walls, where joined by tap or splice to the service drop or overhead service conductors.
19. Service-Entrance Conductors, Underground System: The service conductors between the terminals of the service equipment and the point of connection to the service lateral or underground service conductors
20. Service Equipment: The necessary equipment, usually consisting of a circuit breaker(s) or switch(es) and fuse(s) and their accessories, connected to the load end of service conductors to a building or other structure, or an otherwise designated area, and intended to constitute the main control and cutoff of the supply.
21. Service Lateral: The underground conductors between the utility electric supply system and the service point.
22. Utilization Equipment: Equipment that utilizes electric energy for electronic, electromechanical, chemical, heating, lighting or similar purposes.
23. Upgrade of the Premises Wiring System: The performance characteristics of the existing system are improved through the replacement of old components or the addition of new components.
24. Upgrade of the Electrical System: An existing electrical system of a facility or a major portion of a facility is improved through either (1) the replacement or upgrade of existing components, or (2) through other improvements that alter the performance characteristics of the electrical system. Electrical system upgrade includes, but is not limited to installation of new, medium and low voltage switchgears, medium and low voltage transformers, unit substations, low voltage switchboards, distribution panelboards, motor control centers, and branch circuit panelboards.
25. Upgrade of the Electrical Service: An existing electrical service is improved through either (1) the replacement or upgrade of existing components, or (2) through other improvements that alter the performance characteristics of the electrical service.

B. Emergency Shelter Requirement – Criteria For Determination of Applicability

The following criteria will be used to determine the types of projects that will be subject to the Emergency Shelter Requirement as defined in APG Section XX.1.C. These criteria are to be used for guidance only; final determinations as to applicability of the Emergency Shelter Requirement will be made by the IAC in collaboration with MEMA, DHR, and others:

1. Replacement or Upgrade of the Electrical System. Comprehensive electrical system new installations or renovations, including replacement or upgrade of any of the following electrical system components:
 - a. Electrical service equipment.
 - b. Electrical distribution equipment including: medium and low voltage switchgears, medium and low voltage transformers, unit substations, low voltage switchboards, distribution panelboards, motor control centers, and branch circuit panelboards.
 - c. Emergency system including: emergency generator, automatic transfer switches (ATS), low voltage transformers, distribution and branch circuit panelboards with associated power feeders.
2. Technology In Maryland Schools (TIMS) Upgrade. Comprehensive electrical system renovations required for implementation of TIMS. This includes replacement or upgrade of any of the following electrical system components:
 - a. Electrical service equipment.
 - b. Electrical distribution equipment including: medium and low voltage switchgears, medium and low voltage transformers, unit substations, low voltage switchboards, distribution panelboards, motor control centers, and branch circuit panelboards.
3. New Emergency Power Distribution System. This includes installation of a new emergency power system including, but not limited to the following system components:
 - a. Emergency generator, automatic transfer switches (ATS), low voltage transformers, distribution and branch circuit panelboards with associated power feeders
4. Replacement or Upgrade of Existing Emergency Power Distribution System. Comprehensive electrical system renovations required for the upgrade of the existing emergency distribution system. This includes replacement or upgrade to the following system components:
 - a. When the work requires replacement or upgrade of the electrical service equipment, replacement or upgrade of the electrical distribution system, or replacement or upgrade of the premises wiring system.
 - b. When major modifications/upgrades to the existing electrical distribution system are required. This includes installation of: new circuit breakers in power distribution switchboards and panelboards, new low voltage transformers, and new distribution and branch circuit panelboards.
5. Building HVAC System Renovations. When any of the following conditions occur:
 - a. Comprehensive HVAC system renovations (including replacement of existing AHUs, RTUs, chillers, UV, exhaust fans, cabinet heaters, cooling towers, pumps, burners, hot water generators, VAV units, controls, boilers), which require replacement or upgrade of the electrical service equipment.
 - b. Comprehensive HVAC system renovations (including replacement of existing AHUs, RTUs, chillers, UV, exhaust fans, cabinet heaters, cooling towers, pumps, burners, hot water generators, VAV units, controls, boilers), which require replacement or upgrade of the existing electrical distribution system, including installation of major system components such

as: new circuit breakers in power distribution switchboards and panelboards, new low voltage transformers, and new distribution and branch circuit panelboards.

6. Building Additions. Building additions, when any of the following is required (Note: Emergency Shelter Compliance is required only in the addition, unless noted otherwise):
 - a. New electrical service to the building addition, maintaining existing service to the school.
 - b. New building addition electrical distribution system including: medium and low voltage switchgears, medium and low voltage transformers, unit substations, low voltage switchboards, distribution panelboards, motor control centers, and branch circuit panelboards.
 - c. Replacement or upgrade of the building electrical service equipment (in order to provide full power to both the designated portions of the existing school and to the new building addition).
 - d. Replacement or upgrade of the building electrical distribution equipment including: medium and low voltage switchgears, medium and low voltage transformers, unit substations, low voltage switchboards, distribution panelboards, motor control centers, and branch circuit panelboards (in order to provide full power to both the designated portions of the existing school and to the new building addition).
 - e. Replacement or upgrade of the building emergency system including: emergency generator, automatic transfer switches (ATS), low voltage transformers, distribution and branch circuit panelboards with associated power feeders (in order to provide full power to both the designated portions of the existing school and to the new building addition).
7. Other new and existing building improvements, to be reviewed with LEA to determine applicability of the Emergency Shelter Requirement.

C. Emergency Shelter Requirement – Criteria for Determination of Non-Applicability (Subject to IAC Review)

It is anticipated that the project types listed below will require very limited electrical work. These projects typically will not be subject to the Emergency Shelter Requirement; however, for larger projects, individual determinations may be required:

1. Upgrade to the existing MDF/IDF Rooms, when upgrade of the electrical system is not required.
2. New installation or upgrades to existing Cable Tray Distribution System.
3. New installation or upgrades to existing Card Access, Security and CCTV Systems.
4. New installation or upgrades to existing Lightning Protection System.
5. New installation or upgrade of the existing Fire Alarm System.
6. New installation or upgrade of the existing Data Communications System, when upgrade of the electrical system is not required.
7. New installation or upgrade of existing Public Address/Intercom System
8. New installation or upgrade of existing Kitchen and Cafeteria, when upgrade of the electrical system is not required.

9. New installation or replacement of existing elevator(s), when upgrade of the electrical system is not required. This includes upgrade of system components such as: switchboards, panelboards, low voltage transformers, and power feeders.
10. Upgrades to the existing lighting and lighting control system, when upgrade of the electrical system is not required.
11. Receptacle outlets replacement when upgrade of the electrical system is not required.
12. Computer wiring upgrades, when upgrade of the electrical system is not required.
13. HVAC system renovations (including replacement of existing AHUs, RTUs, chillers, UV, exhaust fans, cabinet heaters, cooling towers, pumps, burners, hot water generators, VAV units, controls, boilers), when upgrade of the electrical system is not required.
14. Installation of new or upgrades to existing Automatic Temperature Control system.
15. Kindergarten/pre-kindergarten classroom renovation, when not extensive and when upgrade of the electrical system is not required.
16. Science classroom renovation, when not extensive and when upgrade of the electrical system is not required.
17. Open space pod conversions, when not extensive and when upgrade of the electrical system is not required.
18. Small building additions, when installation of new electric service or upgrade of the existing building electrical system is not required.
19. Other small new and existing building improvements, to be reviewed with LEA to determine applicability of the Emergency Shelter Requirement.

D. Emergency Shelter Requirement – To Be Determined

Other project types not noted above may be submitted for State funding participation in the annual Capital Improvement Program or other funding programs. A determination will be made on a case-by-case basis as to the applicability of the Emergency Shelter Requirement.

DRAFT

Maintenance of Maryland's Public School Buildings

**STATE OF MARYLAND
PUBLIC SCHOOL CONSTRUCTION PROGRAM**

FY 2011 Annual Report

April 29, 2014

DRAFT

BOARD OF PUBLIC WORKS

Martin O'Malley, Governor
Peter Franchot, Comptroller
Nancy K. Kopp, Treasurer

INTERAGENCY COMMITTEE ON SCHOOL CONSTRUCTION

Lillian M. Lowery, State Superintendent of Schools
Alvin C. Collins, Secretary, Maryland Department of General Services
Richard E. Hall, Secretary, Maryland Department of Planning
Timothy Maloney, Member of the Public
Thomas S. Lewis, Member of the Public

David G. Lever, Executive Director
Joan Schaefer, Deputy Director

Public School Construction Program
200 West Baltimore Street
Baltimore, Maryland 21201-2595
410-767-0617

The following individuals within the Public School Construction Program have made dedicated contributions of time and effort to the Maintenance Inspection Program and the development of this annual report:

Donn Grove, Maintenance Inspector – Lead

Anthony Lassiter, Maintenance Inspector

Trina Narivanchik, Administrative Officer – Maintenance Inspection Section

I. PUBLIC SCHOOL MAINTENANCE IN MARYLAND

A. BACKGROUND

The Board of Public Works (BPW) and the Interagency Committee on School Construction (IAC), the entity established by the BPW to administer the Public School Construction Program (PSCP), have a strong interest in the proper maintenance of Maryland's public school facilities. For all types of facilities, the useful life of the structure is greatly extended through corrective maintenance activities that address existing deficiencies and through a preventive maintenance program that protects against new deficiencies. Good maintenance defers the need for repairs and major renovation, and reduces the cost of renovation when it is eventually needed. Regular maintenance ensures that buildings will remain operational, even under adverse weather conditions.

Established in 1971, the Public School Construction Program has had a long involvement with the maintenance of schools. In the summer of 1973, the BPW directed the IAC to conduct a comprehensive maintenance review of all operating public schools. The results revealed that about 21 percent of the State's 1,259 then-operative schools were in poor or fair condition. To improve upon those findings, comprehensive maintenance guidelines were developed by the IAC and approved by the BPW in 1974. When the *Public School Construction Program Administrative Procedures Guide* (APG) was approved by the IAC in 1981, it included a section on maintenance. A new APG was issued by the IAC in September 1994, containing a revised Section 800 - Maintenance. It describes the procedures for development of a local Comprehensive Maintenance Plan (CMP), required to be submitted by each of the local education agencies (LEAs) to the IAC and the local governments prior to October 15 of each year. The APG specifies how the CMP is to address requirements on the planning, funding, reporting, and compliance monitoring of school maintenance. The requirement to submit an annual CMP is now found in the regulations of the PSCP (COMAR 23.03.02.18).

Parallel to the development of the maintenance procedures, in 1980 the BPW directed the IAC to conduct a full maintenance survey of selected public schools in Maryland. The survey was performed by technical staff assigned to the PSCP by the Department of General Services (DGS). Its initial purpose was to assess the quality of local maintenance programs in approximately 100 school facilities that had benefited from State school construction funding. Subsequently, this survey was authorized to become an annual activity and was expanded to include schools that had not received assistance under the Program. Table A on Page 4 of this document shows the ratings for all inspections made during the thirty-one fiscal years in which the surveys have been conducted, as well as the percentage of schools associated with each rating. Of the 3,666 school surveys conducted during this period, 1,930 (53%) received the highest rating categories of "Superior" and "Good", while 215 (6%) received ratings of "Not Adequate" and 36 (1%) received ratings of "Poor". The remaining 1,485 (40%) schools received "Adequate" ratings. Over the last four years, 25 of the total number of surveys were re-inspections of facilities that had received ratings of "Not Adequate" in the previous year.

The IAC recognizes that there is a connection between maintenance and capital funding. To the extent that funding is provided to renovate or replace older schools, a school system's backlog of deferred maintenance items is also reduced. It is generally far more economical to address building deficiencies through a comprehensive renovation than through piecemeal attention to individual building systems. Of equal importance, a properly conducted renovation that is based on an educational specification which has been developed with the participation of educators results in a building that is not only efficient and safe, but one that is better suited to support the current educational program. Maryland's General Assembly and the Administration provided \$1.93 billion in capital funding between fiscal years 2006 and 2011 for the IAC to

administer; it can safely be said that without this funding and the matching contributions of the local governments, the total backlog of deferred maintenance in our schools would be far greater than it is today. LEAs repeatedly mention how State-funded Capital Improvement Program (CIP) systemic renovation and smaller Aging Schools Program (ASP) and Qualified Zone Academy Bond (QZAB) projects not only improve their buildings, but allow their staff to operate in a more efficient manner.

B. THE CURRENT MAINTENANCE INSPECTION PROGRAM

In July 2005, the Capital Debt Affordability Committee (CDAC), consisting of the State Treasurer, the Comptroller, the Secretary of the Department of Budget and Management, and the Secretary of Transportation requested the IAC to develop recommendations to ensure that Maryland's large investment in school facilities will be well protected through good maintenance practices. Since August 2005 the IAC has implemented a series of practices which are described below:

- The maintenance survey function was transferred from DGS to the PSCP beginning in FY 2007, a recommendation that was approved by the General Assembly in the 2006 session. Subsequently, the PSCP hired two full-time school maintenance inspectors with experience in the fields of building maintenance, operations and construction. The individuals in these positions are charged with the responsibility of conducting approximately 230 new school surveys in 24 school systems per year, as well as re-inspections of schools surveyed in the prior fiscal year that received ratings of "Not Adequate" or "Poor". They prepare the survey reports to be sent to the LEAs, review the responses, and perform follow-up inspections on those schools which received "Poor" or "Not Adequate" ratings. With the addition of these full-time inspectors, an internal goal was established by the PSCP to inspect each school in Maryland once every six years. In FY 2009 and FY 2010, the number of inspections was reduced to 145 (138 new, 7 re-inspections) and 187 (182 new, 5 re-inspections), respectively, to accommodate budget constraints. The target of 230 inspections was restored for FY 2011; however, two years of reduced inspections has led to a one-year delay in achieving the goal of inspecting every school on a six-year rotation.
- The maintenance inspection information is now a routine component of the PSCP Facilities Inventory database. The Facilities Inventory database contains all pertinent data associated with each school facility in the State, making it an invaluable resource for the analysis of statewide maintenance practices as well as a permanent record of each building. A linked maintenance inspection database also provides the ability to compile inspection data into useful reports. In conjunction with consistent inspection and reporting methods, it allows the PSCP to observe changes in the overall maintenance performance of the LEAs, and to identify specific categories where maintenance practices need improvement.
- For the fifth year, this Annual Report includes a brief evaluation of the maintenance practices of each LEA. This approach highlights specific maintenance issues and furthers the dissemination of maintenance best practices throughout the state.
- In response to a requirement of the General Assembly, the IAC issued "Guidelines for Maintenance of Public School Facilities in Maryland" in May 2008.

In addition to these actions, the IAC continues to strengthen the alignment between the maintenance inspection program and the annual Public School Construction CIP.

- Since the FY 2010 CIP, requests for roof replacement projects have been required to include the three most recent roof inspection reports as a threshold condition for project eligibility. IAC staff members have raised questions about several requests that appear to demonstrate premature failure of roofs and mechanical equipment due to poor maintenance.
- LEAs have been encouraged to enlarge the scope of certain systemic renovation projects in order to address deficiencies such as insufficient electrical power, which manifests in excessive use of extension cords and power strips that overload circuits and generate tripping hazards.
- The staff of the IAC discusses maintenance budgets and staffing with LEAs in the annual October meetings on the CIP.
- Members of the IAC routinely raise the subject of maintenance during the annual meeting in December at which local superintendents and their staff appeal staff recommendations for CIP funding.

Because of the prestige and practical importance placed on State funding and the high level of visibility of the entire CIP process, it is anticipated that the consistent linkage of maintenance and CIP funding by the IAC will assist local boards and the governments that support their operating budgets to sustain the staff and other resources needed for effective maintenance programs throughout the state.

TABLE A: MAINTENANCE SURVEY RESULTS FISCAL YEARS 1981-2011

NUMBER OF SCHOOL SURVEYS PERFORMED WITH RATINGS AND PERCENTAGES

Fiscal Year	Superior/Good	Adequate	Not Adequate	Poor	Total

- (1) Increase associated with engagement of two full-time inspectors in the Public School Construction Program.
- (2) Temporary reduction in number of inspections due to budgetary constraints.

II. THE SURVEY: FISCAL YEAR 2011

A. PROCEDURES AND METHODS

- The FY 2011 surveys were conducted by the IAC's two full-time maintenance inspectors. The surveys were performed between August 2010 and June 2011.
- 233 public schools were selected to be surveyed from the 24 school systems throughout the state, three (3) of which were schools that received a rating of "Not Adequate" in FY 2010 and were scheduled for re-inspection.
- In order to update the existing backlog, the choice of the schools to be inspected in FY 2011 was largely based on the oldest inspection dates in our records. The 233 schools selected in FY 2011 represented approximately 24 million square feet of public school space. A portion of one of the buildings dated back to 1895, while other schools were recently constructed. Many had received complete renovations, additions or systemic upgrades.
- After selecting the schools to be surveyed, the inspectors notified each LEA and scheduled a time and date to meet at the facility. The LEA was usually notified two weeks prior to the survey date. Generally, a facility maintenance representative or a member of the school staff accompanied the inspectors to answer questions and assist with access to secured areas.
- During each survey, the inspectors examined 35 different components and building systems, such as roofing, HVAC, electrical equipment and parking lots (see Sample Survey Form, pages 13-15). An evaluation was made for each category by rating the condition, performance, efficiency, preventive maintenance record and life expectancy of the various components and systems. The inspectors' comments were recorded on the survey form.
 - Each of the 35 categories was evaluated and given a rating that ranged from "Poor" to "Superior". Each rating was converted to a numerical score and multiplied by a predetermined factor or "weight". These weights were established by the IAC to indicate the impact that a failed or deficient component could have on life safety or health issues in the facility. Items not present in the facility were indicated as "Not Applicable."

Scoring Levels:

- | <u>Point Range</u> | | <u>Nomenclature</u> |
|--------------------|---|---------------------|
| 96 – 100 | - | Superior |
| 86 – 95 | - | Good |
| 76 – 85 | - | Adequate |
| 66 – 75 | - | Not Adequate |
| 0 – 65 | - | Poor |
- Weighting Values and Description
 - 3 - A serious and potentially urgent impact on safety and/or health.
 - 2 - A serious but not immediate impact on safety and/or health.
 - 1 - Less direct impact on safety and health

- Care is taken during the survey to ensure that the age or demographics of the school do not affect the survey scores. If a school is well maintained and clean, and has older equipment and components that are serviceable and not causing harm to other equipment and building components, it should receive a high score.
- Beginning in FY 2008, safety equipment and emergency preparedness plans were closely evaluated at each facility, as well as the accessibility of the Asbestos Management Plan that is required under federal legislation to be present in school facilities. In addition, since regulations require that semi-annual roofing inspections are to be completed and reports kept on file for the life of the building, LEAs were requested to provide the last three (3) roof inspection reports. At that time, it was found that many roof inspections were not recorded or had not been performed, creating a concern with regards to the warranty issued by the manufacturer. Warranties must be maintained in order to prevent unnecessary and costly premature replacement of the roof systems.
- A copy of each survey and a cover letter was sent to the school system's superintendent and facilities maintenance director. Any building system that was rated "Poor" or "Not Adequate" required a follow-up response from the LEA stating either that the problem had been repaired or describing the method of corrective action that was planned in the near future. Similarly, if a category rated "Superior," "Good," or "Adequate" showed a specific deficiency, a follow-up response was also required. Responses are typically required from the LEA within 30 days of receipt of the letter and surveys. Any school that scores an average rating of "Not Adequate" or "Poor" is required to be repaired to an acceptable condition, or have its deficiencies reasonably addressed to the State's satisfaction, within a 60-day period, after which time a re-inspection is performed.

B. FY 2011 SURVEY RESULTS

FY 2011 Ratings

The specific ratings of schools surveyed in each school district are shown in Table B "FY 2011 Maintenance Survey Results", pages 7-12.

Of the 233 schools surveyed in FY 2011:

- 31 schools were rated as "Superior"
- 131 schools were rated as "Good"
- 66 schools were rated as "Adequate"
- 4 schools were rated as "Not Adequate"
- 1 school was rated as "Poor"

ADDITIONAL NOTES & COMMENTS

FY 2011 MAINTENANCE SURVEY RESULTS: A DISTRICT-BY-DISTRICT OVERVIEW

The following reports provide an overview of maintenance surveys conducted at selected schools in each Maryland public school system. Each report provides general information about the school system, a listing of the schools that were surveyed, and a brief narrative highlighting important aspects of the school system's maintenance program.

Note:

The definition of "**Adjusted Age**" of a school facility, found in the second column of the charts on the following pages, is the averaged age of the total square footage. For the purposes of calculating the Adjusted Age, renovated square footage is generally treated as new.

"**Original existing square footage**" as used in the narratives on the following pages refers to the date of first construction of the oldest remaining square footage in a facility (for example, if a school first built in 1954 received additions in 1960, 1975 and 2003, and the 1954 portion was also demolished in 2003, the original existing square footage would then date from 1960). This is to demonstrate that our older schools are being retained and are well looked after.

Individual school reports are available upon request.
Please contact Ms. Trina Narivanchik at 410-767-0726.

Allegany County

Three schools were inspected in April 2011. Original existing square footage at these schools dates from 1953 to 1996, with adjusted building ages ranging from 16 to 46 years at the time of inspection. The last inspections performed on these schools were in 2003 and 2004. Each of these schools is over 40 years of age. Braddock Middle School and Frost Elementary School were built in 1965 and 1967 and have had no additions or full renovations. Most of Westmar Middle School was constructed in 1953 as a high school, receiving an addition in 1965 and another very small addition in 1996 with a full renovation project. Both Braddock Middle School and Frost Middle School are nicely maintained schools given their age. Braddock Middle School would especially benefit from a major renovation but requires more immediate replacement of its roof due to significant leaking, and will most likely require replacement of its coal-fired boilers before a renovation project will be feasible.

Frost Elementary

Anne Arundel County

Twenty schools were inspected in May 2011. Original existing square footage at these schools dates from 1909 to 2011, with adjusted building ages ranging from 1 to 52 years at the time of inspection.

In general, much of the custodial care and maintenance of schools inspected this fiscal year for this LEA was found to be relatively good. Of the five schools that received "Superior" ratings, four were the most recently constructed of the inspected schools, built between 2005 and 2008, and the fifth, Severna Park Middle School, was the most recently renovated school (2010).

Certain deficiencies were observed to be recurring, having been identified in inspection reports in previous years. These include fire inspection systems not being tested annually by a certified inspector and fire extinguishers not receiving annual inspection, certification or service by a qualified provider as required by code. Required monthly visual inspections of fire extinguishers are typically still being sufficiently performed by onsite staff.

Other safety and management issues that continue to be identified at a number of surveyed schools include poor wire management such as widespread use and improper routing of extension cords and power strips, egress doors and pathways blocked by storage and improperly placed classroom equipment and materials, and completely blocked access to critical electrical and mechanical equipment. Additionally, some roofs are still not receiving sufficient inspections and preventive maintenance, although improvement was noted.

It was recommended that the School Safety Officer and the Facility Manager meet with the local Fire Marshal to discuss safety issues. Routine or more advanced safety training of school administrators and teaching staff would be beneficial. In schools where administrators were observed to be most receptive, responsive, and involved with the building's upkeep, good staff housekeeping and safety practices were more likely to be found, and the buildings were generally in much better condition.

Baltimore City

Twenty-two schools were inspected in January and February 2011, including one re-inspection that was performed on a school receiving a "Not Adequate" rating in FY 2010. Original existing square footage at these schools dates from 1895 to 2002, with adjusted building ages ranging from 1 to 86 years at the time of inspection. All but eight of the schools have an adjusted building age greater than 30 years, with five having an adjusted building age between 48 and 86 years, representative of the aging infrastructure of Baltimore City Schools.

Many of the schools inspected this year appear to have recently received small upgrades and newer equipment, and three received major renovations within the last ten years. However, a number of factors not only have a severely adverse effect on newly installed equipment but also on the general protection, care and upkeep of all of the facilities. These include the lack of sufficient and qualified maintenance personnel at the schools, the apparent inefficiency and ineffectiveness of the organizational structure with regard to facilities, the insufficiency of the maintenance budget, the lack of sufficient project oversight by the construction office, the failure to correct malfunctioning equipment immediately, and related conditions including vandalism and water penetration. Disruptions from gas leaks and lack of proper heating during the winter months were reported for several of the inspected schools.

It is the opinion of the State inspectors that the maintenance budget for this system cannot be cut further without substantially damaging the modest but noticeable progress that has been made over the past five years. The average rating for this school system is a score of 85.74, the first overall "Good" rating since the current scoring process began in 2006, but this is largely due to the high scores for Armistead Gardens PK-8 #243 and James Mosher E. #144. These two schools demonstrate that a high quality of maintenance is possible even under the adverse funding, staffing, and organizational conditions noted above.

The re-inspection of Canton Building #230 revealed that conditions had improved but many of the deficiencies remained. Until conditions at this school are addressed, safety and health issues throughout this building will remain. Lake Clifton High School received a rating of "Poor" based on a number of factors, most significantly concrete structural deficiencies.

Baltimore County

Twenty-five schools were inspected in February and March 2011. Original existing square footage at these schools dates from 1925 to 2008, with adjusted building ages ranging from 1 to 51 years at the time of inspection. Consistent with findings in previous years, inspections revealed improper storage of teaching materials, files, furniture and other items in many of the surveyed schools, in some cases blocking emergency egress and access to equipment in mechanical and electrical rooms in violation of code requirements. The repetitive annual observations on this safety issue reveal a strong need for frequent safety inspections by qualified school system staff and mandatory training for the administrative, teaching and custodial staff.

Electrical distribution issues are also found to be prevalent throughout this school system, based on past and present surveys. All but seven of the schools surveyed this year are in need of additional electrical outlets in classrooms and computer areas to eliminate the excessive and hazardous use of multiple electrical power strips and residential extension cords. Six elementary schools, which contain kindergarten classrooms, have no ground fault interrupt service and present a serious safety issue in the schools where classrooms have electrical appliances near to, and in some cases fish tanks located in, sink areas. This typically can be remedied with minimal cost by a minor installation project, and this should be considered for every affected school to avoid injuries to students and staff. Six of the inspected schools have issues regarding IT wiring and the proper installation and location of computer stations. IT technicians must follow simple code-related guidelines when installing equipment and wiring in these schools.

Many of the schools in this system are receiving excellent custodial care. This is a large, older school system and many of its facilities have received numerous systemic and other small projects over several years in lieu of full renovations. The average of new or renovated square footage in this school system is 28 years in Fiscal Year 2011.

Calvert County

Four schools were inspected in May 2011. Existing square footage dates from 1970 to 2007, with adjusted building ages ranging from 14 to 32 years at the time of inspection. Consistent with prior year ratings, two of the four surveyed schools received Superior ratings. Excellence in overall maintenance and good planning for replacement of worn and outdated parts and systems continue to be credited for these results. Equally important is the superior custodial care and administrative leadership found in Calvert County. This school system maintains a nice balance between old and new facilities, working well with the support of the county government to replace older and outdated facilities after obtaining many years of service from their schools through good stewardship.

Caroline County

Two schools were inspected in March 2011. Original existing square footage at these schools dates from 1959 to 1974. These buildings had adjusted building ages of 29 and 36 years at the time of inspection. Greensboro Elementary School was built as an open classroom school in 1974 and received small additions and minor renovations in 1989 and 1995 to accommodate kindergarten and pre-kindergarten space. The original 1938 portion of Lockerman Middle School was demolished in 1977 when it received an addition and renovation of the prior 1959 and 1963 additions. Another addition was constructed in 1993. Both schools have received upgrades over the last twelve years including roof and chiller replacements, as well as numerous mechanical and electrical upgrades through QZAB and ASP funding.

Both schools are maintained well by custodial staff.

Carroll County

Seven schools were inspected in December 2010. Original existing square footage at these schools dates from 1935 to 2009, with adjusted building ages ranging from 6 to 38 years at time of inspection. Two of the older schools, Eldersburg Elementary, which was built in 1970 as an open-space school and received a kindergarten addition in 2006, and Freedom Elementary, which was built in 1955 and had additions in 1964, 1975, 1995, and 2009, have never received full renovations. Mt. Airy Elementary, with the oldest sections built in 1935, was renovated in 1987, and New Windsor Middle was newly built as a replacement school in 1995.

Taneytown Elementary

Although none of the schools inspected in 2011 achieved a superior rating, it was clear that the Carroll County school facilities department continues to carefully provide routine maintenance and very good custodial care of their schools. Three of the six schools had design or construction deficiencies that negatively impacted roof conditions because of inadequate attic space ventilation and inadequate roof drainage.

Cecil County

Six schools were inspected in October 2010. Original existing square footage at these schools dates from 1928 to 2008, with adjusted building ages ranging from 3 to 60 years. Four of the five schools have some existing square footage constructed between 1928 and 1952. The newest school, North East High School, was constructed in 1970. This school system provides excellent care of its schools and has proven to be a very responsible steward of state and local capital investments.

Charles County

Six schools were inspected in April 2011. Original existing square footage at these schools dates from 1953 to 2009, with adjusted building ages ranging from 16 to 34 years at the time of inspection. Construction of kindergarten/ pre-kindergarten additions was in progress at three of the schools.

Charles County's public schools receive a very high level of custodial care and building maintenance. Buildings and sites are generally very clean and neat. However, several of the individual systems at these schools, such as roof and HVAC, were found to be aged. At the time, replacements of some of these systems were not scheduled until several years into the future. As previously reported, this LEA has historically focused on building new capacity rather than renovating existing facilities due to, in part, the annual large increases in enrollments. This has resulted in noticeable differences of quality in the educational environment of the old and new schools. Renovations, upgrades or system replacements for aging infrastructure would better equalize the physical learning environments, as well as allow for more efficient and economical use of their maintenance resources. Upgrades of existing schools would also provide energy cost savings over time.

A few deficient items affecting health and safety in the inspected schools could be addressed with relatively small financial investment: sufficient asbestos management records were not found onsite at half of the schools, an issue that was noted in the previous year report; some of the schools had no ground fault interrupt service near wet areas, which presents a serious safety issue; and two of the schools did not have vented exhaust for cooking stations that were not located in the kitchen.

Dorchester County

Three schools were inspected in March 2011. Original existing square footage at these schools dates from 1976 for two of the schools and 1982 for the other school. At the time of the inspection, the 1982 school had an adjusted age of 26 years due to small additions in 1990 and 1996 while the two 1976 schools had no age adjustment. None of the schools have had full renovations, although they have received many system upgrades and replacements. Most of these projects have utilized ASP and QZAB funding; these popular programs continue to be important funding resources for the LEAs. Cambridge/South Dorchester High School has particularly benefited from many of these small projects. However, in the 2011 survey, it received poor ratings for three issues: the greatly deteriorated condition of its track and athletic field house, the excessive amount of storage and wall display clutter, and the dangerous storage practices and other safety issues. Hurlock and Maple Elementary Schools received commendations for being very well maintained and for the attention given to the facilities by the school administrators and communities.

Frederick County

Eleven schools were inspected in December 2010. Original existing square footage at these schools dates from 1933 to 2008, with adjusted building ages ranging from 17 to 44 years at the time of inspection. Considerable advances were observed this year in increased roofing inspections, roofing maintenance and the number of roofing replacements which were completed and/or scheduled for replacement. However, a number of adverse roof conditions were still found, such as leaking seams at gutters, parapet/wall flashing separation, the need for roof replacement at two of the schools, and a serious rain leader leak at Windsor Knolls Middle School. A large number of stained ceiling tiles were also observed at Brunswick High School and Middletown High School; this is a concern since it is generally an indication of serious or long-standing leaks and/or mechanical or plumbing deficiencies, and because of the possible development of mold and mildew. Two issues at Middletown High School, leaks at outside HVAC air dampers on the windward side of the school, and condensation or valve leaks throughout, are causing much of this damage, and may be due to design or construction flaws.

Notwithstanding the items noted, Frederick County Public Schools is considered to have excellent facility and maintenance staff who are very attentive to the needs of their facilities. The majority of the surveyed schools were also found to be receiving excellent custodial care.

Garrett County

Three schools were inspected in April 2011. Original existing square footage at these schools dates from 1958 to 2009, with adjusted building ages ranging from 2 to 34 years at the time of inspection. These schools were found to be in very nice overall condition, although some minor maintenance repairs were needed and a few much needed equipment replacement projects were pending. Custodial maintenance and onsite upkeep are at a high level. Northern Middle School, constructed in 1978 as an open-space classroom school, received an addition and total renovation that enclosed the classrooms in 2009. Garrett County Public Schools is commended for transforming this facility into a well-designed school, constructed apparently with excellent oversight as there do not appear to be any residual construction issues. It is beautifully maintained. Southern Middle was constructed in 1997, similarly with open-space classrooms but with partitions subsequently installed. It houses a boiler and a chiller that supply heating and cooling via underground piping to the adjacent Broad Ford Elementary School as well as for its own use. Swan Meadow Elementary School, a small community-based school dating from 1958 and partially renovated when an addition was constructed in 2009, is equally well-maintained but has a ground water penetration problem at the exterior door in the basement.

Harford County

Eight schools were inspected in January 2011. Original existing square footage at these schools dates from 1956 to 2006, with adjusted building ages ranging from 17 to 47 years at the time of inspection. None of the surveyed schools are new and the only one that has been renovated is William Paca/Old Post Road Elementary School, initially constructed in 1956 and renovated 36 years ago.

Maintenance at the schools inspected this year continues to be an advancement over previous years, although the need for improvement regarding numerous health and safety issues is still apparent. Frequent and hands-on training, as well as steady oversight, is needed for the school administration and teaching staff to alleviate health and safety hazards and conditions.

At the Harford County Technical High School it was found that the heating return lines were not properly replaced with the addition/renovation project in 1999. Improperly gauged copper pipe was installed, and consequently pipes are leaking and failing, causing flooding and other damage. This failure is costly to repair and could potentially cause problems with indoor air quality due to mold and mildew. This is a good example of the need for vigilant design and construction oversight.

DRAFT

This page was intentionally left blank.

Howard County

Thirteen schools were inspected in June 2011. Original existing square footage at these schools dates from 1970 to 2011, with adjusted building ages ranging from less than 1 to 35 years at the time of inspection. Two of the schools had 75% or more unrenovated original 1970s square footage and one of those, Stevens Forest Elementary, was undergoing a renovation/addition that was expected to be complete in the summer of 2013. Three of the schools originally date from the 1970s but had been or were being renovated in 2008 through 2011. The remaining eight schools have 80% or more of their square footage dating from the original construction (1992 to 1997).

Custodial care in Howard County appears to be high and schools were typically very clean. The schools surveyed this year generally appear to receive good maintenance service, with a thorough and timely approach to work order system reporting, tracking and management. Routine equipment inspection and maintenance service is performed with dated and protected maintenance logs/tags displayed onsite. For a number of years, an annual electrical switchgear evaluation program has been operated through the Maryland Association of Boards of Education (MABE) Office of Risk Management. The LEA reported that a countywide building HVAC balancing program was being initiated to improve system efficiency.

All of these programs have greatly contributed to Howard County's overall success in maintaining their schools. Nevertheless, there are certain areas in which significant improvements are needed. It was reported that fire extinguishers in all county public schools were maintained and certified by a only a single school system employee, resulting in the required monthly visual inspections being overdue in some of the schools by up to three months; understaffing appears to be an issue. Roofing systems did not appear to receive adequate preventive maintenance care even when personnel had already been onsite performing reactive maintenance servicing. Unsafe storage practices were observed in many of the schools, including blocked access to utility shut-offs and fire extinguishers, and obstructed egress from classrooms and other areas; these conditions do not appear to be the result of custodial actions but rather of the teaching staff. Lastly, moderate

to severe deterioration of the brick, concrete and mortar was observed on the exterior free-standing masonry walls at six of the thirteen surveyed schools; this particular concern, which may pose potential safety and/or cost risks, may be attributable to either design or construction errors, or to both. HCPSS reported in their response that these issues are being addressed.

Kent County

One school was inspected in October 2010. Original existing square footage at Rock Hall Elementary School dates from 1950 with an adjusted building age of 47 years at the time of inspection as a result of two additions. The original 1915 square footage was demolished in 2003. This nicely maintained older facility, located in the center of Rock Hall, previously served as the middle school for the community. (Since the date of this report, the educational program has been relocated to another facility and the original elementary school is now used for administrative purposes.) The school never received a major renovation, but had a systemic HVAC renovation project in 2002, new windows and exterior doors installed in 2004, a small carpet replacement project in 2006, QZAB projects in 2009 and 2012 for computer equipment and a wireless upgrade, and an ASP project in 2011 for access control, all with State funding. The staff and administration took very good care of this school and their pride showed throughout the building. However, the roof, installed in 1998 and 12 years old at the time of the inspection, showed active leaks and the need for a more proactive preventive maintenance effort to prevent eventual premature failure.

DRAFT

This page was intentionally left blank.

Montgomery County

Thirty-five schools were inspected in October and November of 2010. Original existing square footage at these schools dates from 1950 to 2011, with adjusted building ages ranging from 1 to 48 years at the time of inspection.

Generally, the same types of deficiencies were found in FY 2011 as in the prior four years of inspections. Repeated observations include delays in repairs to roofs and a lack of routine roof maintenance at some schools, although the frequency and scheduling of roof inspections has improved. Of note are the numerous schools with stained ceilings that appear to be due to disregarded or unresolved roof and/or condensation and valve leaks, with some ceilings showing discoloration that strongly suggests mold presence. This needs additional attention by MCPS because mold can become a very serious health hazard if not treated promptly. Serious indoor air quality issues were suspected at Walt Whitman High School for this and possibly other reasons. Also referenced in a prior annual report, an appearance of neglect was observed at schools such as Bel Pre Elementary School where replacement projects are planned for future years.

As noted in inspection reports in previous years, a majority of the schools inspected this year have no evidence of receiving monthly visual inspections of fire extinguishers as required in the fire code, and a number of the schools did not have the required asbestos management plans available onsite. Although it appears that efforts are being made by MCPS to address these and other safety issues, it is strongly recommended that schools receive increased and routine monitoring and assessment, and sufficient training be provided to all staff.

Although Montgomery County Public Schools shares many of the same maintenance issues with the other large school systems in Maryland, this system has a very good maintenance program and appears to have a well-planned system replacement program. MCPS consistently presents a CIP request to the State that is well balanced between large school replacement and renovation/addition projects, and small system replacement, usually roof or HVAC, requests.

Prince George's County

Thirty-three schools were inspected in August and September 2010. Original square footage at these schools dates from 1938 to 2007, with adjusted building ages ranging from 16 to 57 years at the time of inspection. Of these, twenty-eight schools had an adjusted age of thirty years or greater. Prince George's County has the third oldest facilities in the State; only Kent County and Baltimore City have an older average age of square footage.

An unreasonable percentage of buildings were found to not be in "ready" condition to open for the school year. A large number of items that are typically correctable over the summer break were not addressed; these include replacement of stained ceiling tiles, removal of improperly stored materials from storage closets and the top surfaces of unit ventilators, cut-back of trees overhanging roofs, cleaning of roof drains and removal of debris from roofs, and repair of air conditioning equipment and plumbing deficiencies. The grounds and facility exteriors were not maintained until after school had begun; many of the schools had faulty or broken cleaning and grounds-keeping equipment which should have been repaired and used over the summer months. Also, rectification of the lack of proper and working fire suppression and other safety devices, as well as the total lack of emergency preparedness and evacuation procedures and instruction were not addressed, although these are essential for providing a safe environment.

These items are not new to the inspection process and the same issues have appeared in prior year inspection reports, regardless of what time of year inspections were performed. Additionally, many health issues were uncovered this year such as mold and mildew on walls, ceilings and equipment in the buildings, filters not being replaced in heating and air conditioning equipment, unrepaired non-operational exhaust fans in the restrooms, and a multitude of leaks from faulty and unsatisfactorily installed or maintained equipment left unaddressed. These issues can all create air quality problems in buildings and should not be allowed to remain.

The two re-inspections, completed in February 2011, found that at least eight areas of deficiency noted in the first inspection of each school were not corrected by the time of the re-inspection. Of these, four were misreported as corrected or in the process of being corrected prior to the re-inspection.

Although at the time of the inspections there appeared to be a disregard for the maintenance of the buildings, the previous inspection findings, and the safety and well-being of the staff and students that use them, PGCPs responded promptly and vigorously to our correspondence and the school reports, reorganizing their maintenance and plant

management departments under one group, replacing leadership in these areas, revamping their internal inspection programs, expanding their preventive maintenance efforts, and standardizing staff training. Frequent hands-on safety training needs to be routinely given to the principals and staff at all schools as well. Contract services should also be reviewed, and oversight of work must be maintained so that the services provided are satisfactorily completed prior to annual, monthly or final payments are made.

These deficiencies have a significant impact on the health and safety of building occupants. Resolution of the majority of these issues depends on good preventive maintenance and facility management practices rather than on capital investments.

Queen Anne's County

Three schools were inspected in March and April 2011. Original existing square footage at these schools dates from 1916 to 1998, with adjusted building ages of 13 (as a result of additions and renovations at the oldest school) and 20 years at the time of inspection. Church Hill Elementary School, the oldest school inspected this year, is very well maintained and received a Superior rating. This is a lovely example of an older school in an established older community. Built in 1916 with additions in 1954 and 1971, it was renovated in 1998 when another addition was constructed.

Church Hill Elementary

The other two schools surveyed had serious roofing issues and staff was unable to locate and utilize roof warranties even though the roof on one of the schools, Bayside Elementary School, was replaced as recently as 2009. These conditions can lead to indoor air quality issues and damages to finishes and systems if they are left unrepaired. Additionally, Kent Island High School, built in 1998, was observed to have several construction defects, including poor roof installation, as well as safety and damage issues attributable to the construction defects, to delayed correction of deteriorated or damaged building components, and to educational staff activities. Many of these issues are reported by the school system to have been corrected.

FY 2011

- 14 total active schools in the system

St. Mary's County

Four schools were inspected in April and May 2011. Original existing square footage at these schools dates from 1954 to 2008 with an adjusted building age ranging from 3 to 39 years at the time of the inspections. All of these schools have older square footage and have received multiple additions over time. One of the schools, Greenview Knolls Elementary School, was built in 1965 and has never been renovated, although it received four additions and an HVAC replacement project was planned at the time of inspection. Town Creek Elementary School, built in 1968, received additions in 1964, 1981, 2002, and 2006 but has never had a full renovation except for a project of 10,000 square feet in 1981.

Leonardtown Elementary

St. Mary's County does an excellent job of maintaining its older school infrastructure while adding new square footage to accommodate an increasing school population. Overall, the square footage of schools in this system is relatively new. St. Mary's has been in the top five Maryland school systems with the newest age of square footage; the average age of their schools is between ten and twelve years above the statewide average. St. Mary's County has a very nice balance of old and new facilities, and clearly benefits from the school system's excellent planning and good stewardship of its schools.

Somerset County

Two schools were inspected in March 2011. Original existing square footage at these schools dates from 1952 to 2008 at Crisfield High School and from 1976 at J. M. Tawes Vo-Tech, with respective adjusted building ages of 14 and 35 years.

Crisfield High School, renovated when an addition was constructed in 1997, was found to have health and safety issues that needed to be addressed, including numerous stained ceiling tiles, some appearing to contain mold; blocked electrical equipment, fire extinguishers and exits; and improperly stored materials. Significant structural cracking of the masonry walls, most extensively found in the Gym, needed additional investigation and, at a minimum, monitoring to determine if the structural problem is progressive. A separate athletic storage building was constructed in 2008 with State funding.

J. M. Tawes Vo-Tech has not undergone a building renovation since it was constructed in 1976, although the HVAC and roof systems were replaced in 2001 and 2002, respectively. This school shares the facility with the offices of the Somerset County Board of Education and is very well maintained by the maintenance and custodial staff.

Crisfield High

Talbot County

Two schools were inspected in April 2011. Original existing square footage at these schools dates from 1952 to 2001 at Chapel District Elementary and 1966 to 1999 at Easton High School, with adjusted building ages as a result of renovations and additions of 17 and 14 years, respectively.

Easton High School was renovated and added to in 1997 with more additions completed in 1999. One addition was an automotive technology center which was completed with private funding, and the other addition houses an auxiliary gym and weight room. ASP funding was provided to replace the exterior lighting in 1998, renovate the aging track in 1999, and install a new green house in 2006. The Chapel District Elementary School was renovated in 1994 with an additional 30,477 square feet constructed at that time. Two more additions were added in 2000 and 2001 for a day care center and two kindergarten classrooms. ASP funding was provided for a playground addition in 2006 and, recently, for replacement of the telephone system. Both schools are very well maintained and have been well cared for over the years.

Talbot County consistently earns high maintenance ratings. Over the last five years, Talbot County schools have earned three Superior and three Good ratings for the six schools surveyed.

Chapel District Elementary

FY 2011

Washington County

Nine schools were inspected in April 2011. Original existing square footage at these schools dates from 1924 to 2006, with adjusted building ages ranging from 6 to 57 years. Schools inspected this year were in very good condition with the two oldest buildings, which have portions that were constructed in 1924 and 1936, receiving Superior ratings.

All of the surveyed schools in Washington County receive very high quality onsite maintenance and custodial services. Cascade Elementary School and Sharpsburg Elementary School are exceptionally well maintained. Salem Elementary School, which was fully renovated in 2005 with the construction of a large addition, is a beautiful school, although better oversight by the administration is recommended to prevent finishes from being prematurely damaged by the attachment of an excessive amount of items to wall and ceiling surfaces. WCPS has produced a "Safe Classroom Teacher Self Checklist" to promote safety in schools, and has indicated that it has been provided to all of the schools.

Cascade Elementary

Wicomico County

Five schools were inspected in March 2011. Original square footage at these schools dates from 1942 to 2008, with adjusted building ages ranging from 3 to 47 years. Except for West Salisbury Elementary, each of these schools has received renovations and additions over the years, and three of the schools have received a number of equipment upgrades and replacements through CIP and ASP funding. The custodial and maintenance staffs have maintained these schools very well.

West Salisbury Elementary School is a small school, built in 1964, with a number of portable classroom buildings on its site. East Salisbury Elementary School, which is the oldest of the inspected buildings and still has a slate roof over the original section, was constructed in 1942 with several subsequent additions. Both schools will greatly benefit from planned replacement and renovation projects, although the maintenance and upkeep has been very good.

Wicomico County facilities staff does an exceptional job of planning for future projects that will consistently update their school inventory while balancing capital needs with local budget considerations.

Prince Street Elementary

Worcester County

Three schools were inspected in March 2011. Original existing square footage at these schools dates from 1958 to 1970, reflecting adjusted building ages of 29 to 41 years. Of the three schools inspected this year, only Snow Hill High, the oldest of the three, has received a complete building renovation, and that occurred in 1982.

All three surveyed schools were in a similarly well maintained condition. Pocomoke Middle School and Snow Hill Middle School were both constructed in 1970 and, while never fully renovated, have received improvements through systemic renovation projects such as roofing and HVAC replacements as well as numerous small QZAB and ASP projects. Along with Berlin Intermediate School, which was also constructed in 1970 and has never received a complete renovation, these two schools are now over forty years old and long-term planning for renovations should be under consideration
